**Amateur Photographer** For everyone who loves photography

**WITH A** general election and a new camera all in the same week, it's been almost more than I can deal with, but the timing got me thinking about allegiances, politics and the way photographers treat camera systems. Perhaps the systems we use can be linked to the stereotypes of our political parties. Full-frame and 35mm cameras might be compared to the Conservative way of thinking, while the APS-C sensor DSLR could be linked to the historic ideal of the Labour Party being the workers' choice. Four Thirds and its Micro ally might represent the alternative way the Liberal Democrats say they offer. Ricoh's GXR and its standalone thinking would combine all the independents, while I have yet to align a system with

the BNP – or the Green Party for that matter.

Sony's new pair of micro-system cameras (MSC) certainly adds a massive power of strength to the idea of the miniature EVF interchangeable concept, and along with Samsung's NX10 opens the field for the use of APS-C sensors in this type of product. Just as we've had a multi-party system for some time, I don't think one format will wipe out the others but the progress of the Swingometer over the coming years will certainly be interesting.

**HOW TO HAVE YOUR PICTURES PUBLISHED IN READER SPOTLIGHT** Send in a selection of up to ten images. They can be either a selection of different images or all have the same theme. Digital files sent on CD should be saved in a Photoshop-compatible format, such as JPEG or TIFF, with a contact sheet and submission form. Visit [www.amateurphotographer.co.uk/readerspotlight](http://www.amateurphotographer.co.uk/readerspotlight) for details. We cannot publish images without the necessary technical details. Each RGB image should be a minimum of 2480 pixels along its longest length. Transparencies and prints are also accepted. We recommend that transparencies are sent without glass mounts and posted via Special Delivery. For transparencies, prints or discs to be returned you must include an SAE with sufficient postage.

Sony unveils interchangeable-lens cameras • Models due out in June

## SONY ENTERS MIRRORLESS-SYSTEM CAMERA ARENA

**SONY** has taken its first steps into the mirrorless interchangeable-lens camera market with the launch of the NEX-5 and NEX-3.

Due to arrive in the UK in early to mid-June, the 14.2-million-pixel NEX-5 and NEX-3 each boast an Exmor APS HD CMOS sensor, Bionz image processor and a bayonet E-mount lens attachment.

An optional adapter (LA-EA1) will allow the use of Sony, Minolta and Konica Minolta AF lenses, although AF will not be possible. The adapter is expected to cost around £150 and be available at the same time as the cameras.

Targeted at photo enthusiasts and beginners alike, the cameras are primed to take on the growing market for interchangeable-lens compacts, spearheaded by the likes of Olympus, Panasonic and Samsung.

Sony is keen to trumpet the cameras' size advantage over DSLRs. The magnesium-bodied NEX-5 flagship, for example, weighs 287g and measures 24.2mm at its thinnest point (excluding grip and lens mount).

Accessibility for users was also key for developers. To aid handling, a control dial allows the photographer to preview depth of field changes 'live' on the 3in, 921,000-dot, adjustable-angle LCD screen. There is also a library of on-screen 'shooting tips'.

The NEX-5 features Full 1920x1080 AVCHD-format movie recording (activated via a dedicated movie-record button), while the NEX-3 shoots 1280x720-pixel MPEG4 videos.

Other features include a 25-point AF system, 49-segment metering, raw file recording, a top equivalent ISO sensitivity of 12,800 and up to seven frames per second shooting in 'speed priority' mode.

The cameras house a High Dynamic Range option and are designed to be able to record 3D-format images, using the Sweep Panorama mode, via a firmware upgrade due to be released in July.

This will allow the movies to be transferred (via an HDMI output cable) onto 3D-enabled televisions and viewed in 3D using special glasses. The 3D-format video will not be viewable on-camera.

Accessories will include an optical viewfinder (FDA-SV1), priced around £150. A dedicated hotshoe-mountable flash unit will be bundled with the camera.

To coincide with the launches, Sony has launched the Optical SteadyShot-enabled 18-55mm f/3.5-5.6 and 18-200mm f/3.5-6.3 zoom lenses (the latter priced £500-£600). A 16mm f/2.8 pancake lens (£200-£220), plus an Ultra Wide Converter (VCL-ECU1) and Fisheye converter (VCL-ECF1) will also be available.

The NEX-5 kit, with the 18-55mm lens, is due to cost £550-£600. We understand that the NEX-3 outfit with the same lens will retail for £450-£500.

The 18-200mm lens will also be out in a kit with NEX-5 only, although the price is not yet known.

We expect the Ultra Wide Converter and Fisheye converter to cost around £100 each.

The cameras will not be available body-only, says Sony.

## PENTAX WILL NOT RULE OUT MIRRORLESS CAMERA

**PENTAX** engineers are continuing to pursue the possibility of launching a mirrorless interchangeable-lens camera, as the firm points to an 'exciting' few months ahead.

In a recent interview with AP, Pentax UK product co-ordinator Stephen Sanderson said Pentax's Japanese HQ has not ruled out the launch of such a camera at a future date.

He added: 'It's quite clear that we don't want to be seen as the same as everyone else. We would go down a different route.'

Sanderson said 2010 promises to be a big year for Pentax. He told us: 'We are looking to grow. We want to grow. It's going to be an exciting year. I think everybody will see a change in Pentax.'

However, Sanderson did not reveal details of what types of camera we can expect in the run up to the photokina show in Germany in September.

## SNAP SHOTS

● A row erupted over a photograph of Conservative leader David Cameron amid claims it was published in the *Daily Mirror* newspaper on election day without permission. The picture, splashed across the paper's front page, shows Cameron drinking with friends when he was a member of the Bullingdon Club while studying at Oxford University in 1987.

● UK consumers snapped up nearly 10% more interchangeable-lens digital compact cameras in March 2010 than they did the month before, latest figures show. Volume sales of mirrorless interchangeable-lens cameras reached 3,180 – a 9.3% rise on figures for February. This generated £1,647,212 in sales revenue. The total number of interchangeable-lens cameras sold in March, including DSLRs, fell 8% compared to the same month last year.

Japanese outline future for GXR system

## RICOH'S 28-300MM SUPERZOOM DEBUT

**RICOH** has revealed full details of its new 28-300mm GXR-system camera unit and confirmed a UK price. The P10 28-300mm f/3.5-5.6 VC will cost a penny under £250 when it arrives in UK stores at the beginning of June, according to Keita Hashizume, manager for Ricoh's European camera business.

In a meeting with AP, Hashizume explained that the superzoom unit will be fitted with a 1/2.3in, ten-million-pixel, back-illuminated CMOS sensor. The new module is also equipped with a 1cm macro function and dynamic range double shot.

The sensor is the same unit as that used in the company's CX3 compact camera, but a new image-processing engine, Smooth Imaging Engine IV, should reduce noise levels when the sensor is used above ISO 800. The top ISO rating is 3200.

Capable of recording full-resolution (raw-format) bursts of up to 5fps, the P10 unit can also shoot 1280x720-pixel HD movies.

The VC in the name refers to Ricoh's sensor-shift image-stabilisation function that helps to compensate for the effects of camera shake.

Kazunobu Saiki, the outgoing general manager for Ricoh's European camera business, tells us that the lens unit will come pre-loaded with a firmware update for the GXR body.

'As soon as the lens unit is fitted to the body, a message will appear on the screen asking the user to update the body firmware. The firmware is already loaded in the lens unit, so the process is very simple and users will not have to download it to an SD card from the internet,' Saiki said.

At the meeting, Ricoh also confirmed that the A12 28mm f/2.5 wideangle fixed-

Keita Hashizume, manager for Ricoh's European camera business (right) with Kazunobu Saiki

focal-length lens unit will be arriving in the autumn. The lens has an actual focal length of about 18mm, but will act as a 28mm lens would on a 35mm sensor.

The lens will be paired with an APS-C CMOS sensor. Ricoh will also announce plans later this year for more lens units and modules for the GXR system.

Saiki tells us that, of all the concept units Ricoh has presented to the public (that will slide into the GXR body), the most popular have been a projector unit, a hard-drive storage unit and a sensor-only unit that allows non-Ricoh lenses to be mounted to it.

Further ideas include a remotely controlled lens unit that will be connected to the camera body via a cable for photographing in difficult places, a wirelessly controlled underwater unit, a printer unit and a GPS unit.

In recognition of the company's core business interests, Saiki also showed us a dummy photocopying unit, but added that commercialisation of this particular product is a slender possibility.

Canon set to debut CanoScan 9000F flatbed

## CANON LAUNCHES SCANNER

**CANON** is set to launch the CanoScan 9000F, an A4 flatbed scanner boasting a resolution of 9600x9600ppi.

The scanner features a 48-bit colour depth delivering 'exceptionally accurate colour rendition', claims the firm.

It includes an adapter for scanning a 12-frame strip of 35mm negatives or four 35mm mounted slides. It also accepts 120-format images (max 6x22cm).

The kit, out in June priced £229, will include Adobe Photoshop Elements software.

## SNAP SHOTS

● A royal photographer has been accused of digitally manipulating images of Prince Felipe of Spain for official portraits. Dany Virgili faces claims that he superimposed the same image of the prince's head on three separate portraits showing him wearing different uniforms. Newspaper *El Mundo* suspected the same face had been used in all three publicity pictures after closely examining all three together. Virgili and the country's royal palace deny Photoshop was used to manipulate the pictures.

● Free Aperture software workshops are taking place at Apple's flagship store in Regent Street, London, during May. Hosted by photographer Denis O'Regan, the events take place on 17, 24 and 31 May, from 3-5pm. For details visit [www.apple.com/uk/retail/regentstreet](http://www.apple.com/uk/retail/regentstreet).

● Manfrotto has launched a series of promotions that run until 31 July 2010. Customers can claim £20 cashback on a 190XPROB tripod, plus a free Manfrotto 234 or 234RC monopod tilt head when they buy selected monopods. For full details call 01293 583 300 or visit [www.manfrottodistribution.co.uk](http://www.manfrottodistribution.co.uk).

Are these European gongs really all they are cracked up to be?

## TIPA AWARDS VALUE QUESTIONED

**THE TECHNICAL** Image Press Association (TIPA) has named its best camera gear amid concerns from *Amateur Photographer* that the annual awards are worthless (see *AP comment*, right).

One of this year's winners was Adobe Photoshop CS5, which was only announced ten days before the results were announced and is not yet available, leading *AP* to question the value of the awards.

The awards are voted for by publications across Europe. *AP* does not belong to TIPA.

Canon's EOS 7D was named Best Expert DSLR, the Pentax K-x the Best Entry-level DSLR and Leica's M9 the Best Prestige Camera. The Nikon D3S won the title of Best Professional DSLR camera.

Meanwhile, the Olympus Pen E-PL1 triumphed in the Entry-level Compact System Camera category. Fujifilm's FinePix HS10 won honours for the Best Superzoom Camera, the Casio Exilim EX-G1 topped the category for Best Rugged Compact Camera and Panasonic's Lumix DMC-G2 was voted the Best Advanced Compact System Camera. The award for Best Compact Camera went to Sony's Cyber-shot DSC-HX5V.

I wouldn't usually bother making any comment about the TIPA awards, but this year I feel I must. I'm not commenting because TIPA is a rival association to the one *AP* belongs to (EISA), or that rival UK magazines belong to TIPA, but because I'm annoyed that TIPA seems intent on devaluing product awards in general.

I appreciate there is often a feeling among some readers that somehow manufacturers are able to influence the nominations and choices of winning products in our own *AP* Product Awards with promises of advertising and incentives, and cynics will always speak with the waft of corruption beneath their nostrils when any product awards programme is discussed. Yet announcing that a particular product is the best of its type before it could have been used or tested properly does not help. I really wonder how well TIPA members have tested anything that has been awarded this year, when it is clear that two of those products could not possibly have been examined to any decent extent.

The first finished model of the Panasonic Lumix DMC-G2 available in the UK only arrived in the *AP* office in mid-April, with the firmware only just updated, and Adobe's Photoshop CS5, while pre-disclosed to us some time ago, was not available as a final version for testing, either. In both

### AP COMMENT

Damien Demolder  
Editor

cases each product appears great on paper, but one can hardly say either is the best in its class unless it is tested thoroughly. Even if a good solid model of the G2 were available when the awards were decided, that could demonstrate exactly what consumers will buy themselves, I wonder how many of the 29 TIPA members got to use it. It is important to remember that product awards are for the benefit of consumers rather than for the good of manufacturers.

When we decide our *AP* Awards, the choices are made on the basis of which have been the best products tested within the past 12 months. Maybe the majority of TIPA members have tested finished versions of all these products so they can testify to their readers, and to the European camera-buying public, that they fully understand exactly how these products perform. If they haven't, they are damaging the trust of consumers in any awards programme, and they are failing in their duty as magazines to direct their readers with honesty and integrity. I sincerely hope I am wrong.

Instant camera giant defends launch of Polaroid 300

## POLAROID UNDER FIRE OVER NEW CAMERA

**POLAROID** insists that its recently announced Polaroid 300 instant film camera is the first of a number of analogue models it plans to launch in the coming months. The firm was responding to an accusation that it is 'twisting its story' about the cameras it plans to introduce this year.

Polaroid had angered management at the Impossible Project after revealing the Polaroid 300 (*News*, *AP* 15 May), an instant camera that produces business card-sized prints, based on a Fujifilm Instax mini camera. Developed in partnership with Fuji, it does not use traditional Polaroid 600 film.

Impossible BV, which recently started making traditional instant film using Polaroid's production plant in Amsterdam,

the Netherlands, had expected Polaroid to launch a new version of the Polaroid 1000 camera, which accepts 600-format film. The 1000 model was showcased at the Consumer Electronics Show in January.

A spokeswoman for Impossible BV told us: 'The management of the Impossible Project finds this confusing and clearly wants to state that the Polaroid 300 is not the camera that has been announced in Polaroid's press release from 7 January 2010.'

Impossible BV has also accused Polaroid of leaving it in the dark about cameras it plans to launch.

A Polaroid spokesperson told us: 'The launch of the Polaroid 300 is only the beginning of the Polaroid Movement marking the return of instant photography...'

AP  
THIS  
WEEK  
IN...

1948

A curious image appeared in an advertisement in AP's issue dated 26 May 1948. Headlined *Cruelty to tripods? – not in this case*, the ad showed a rather jolly-looking Harold White FRPS demonstrating how a Nebro London tripod was able to bear 'really substantial weight'. Harold had sent a letter of congratulation – plus the said photo – to tripod supplier Neville Brown & Co Ltd. 'You have accomplished a miracle of lightness combined with strength,' wrote Harold. Note: Members of AP's technical team say they have no plans to introduce such a criterion for future tests.

## SNAP SHOTS

● Photographs taken by, or featuring someone with, a learning disability are being sought for a competition organised by the charity Mencap. The annual contest, called Snap, is split into the following categories: Active together, Watching the Action, Local Life, Sporting Hero, Olympics and Getting Out. The closing date is 21 June 2010. Visit [www.mencap.org.uk/snap](http://www.mencap.org.uk/snap) for more details.

● Photo printers are helping police crack crime in Japan, according to Sony. Japan's national police department has rolled out more than 6,000 Sony SnapLab digital photo printers, using them as 'on-location photo labs'. The printers are being used by the Photo Section Identification Division to print out photos on the spot for use as supporting evidence.

## Top prize of £1,000 up for grabs 2010 ASTRONOMY COMPETITION LAUNCHED

**A GLOBAL** search is underway to find the 2010 Astronomy Photographer of the Year.

Open to both amateur and professional photographers, the Astronomy Photographer of the Year competition features four categories: Earth and Space, Our Solar System, Deep Space and Young Astronomy Photographer of the Year.

There will also be two special prizes, People and Space, and Best Newcomer, with the Best Newcomer prize awarded to the best photo by an amateur who has taken up astrophotography in the past year but not entered the competition before.

Last year's inaugural competition was won by British photographer Martin Pugh.

Dr Marek Kukula, an astronomer at the Royal Observatory in Greenwich, said: 'We were blown away by the quality of the entries in 2009. This year we would like to capitalise on this enthusiasm and talent, and hopefully we'll see more entries, especially for the Young Photographer category.'

The winner will bag £1,000 in prize money, while category winners will receive £250.

The closing date for entries is 16 July 2010 and the best shots will go on show at the Royal Observatory in Greenwich, London SE10, from 10 September 2010–9 January 2011. For details visit [www.flickr.com/groups/astrophoto](http://www.flickr.com/groups/astrophoto).

## Free online training sessions ONLINE SEMINARS GO LIVE

**PHOTOGRAPHERS** and videographers are sharing their techniques in a series of free online training sessions.

'The Manfrotto School of Excellence is an online tutorial platform that will allow users to log on and access the experience and know-how of the world's most famous photographers and videographers,' said a Manfrotto spokesman.

The tutorials are presented in video or 'editorial' format, with each 'seminar' lasting 30–45 minutes. Subjects covered include portraits, still life, news photo/videography and documentaries.

'The platform will offer a series of free training sessions of varying difficulty (from beginner to advanced level), designed to add to the

knowledge of all enthusiasts, amateurs and professionals alike,' claimed Manfrotto.

'It is just the thing for those wishing to take their skills to the next level and satisfy demanding customer expectations, or for hobbyists who want to pick up some tips to implement in their own creative world.'

For details visit [www.manfrottoschoolofexcellence.com](http://www.manfrottoschoolofexcellence.com) or call 01293 583 300.

## CLUBNEWS

Club news from around the country

### ONGAR PHOTOGRAPHIC CLUB

The club will host its annual exhibition on 22 May (9am–4pm) at Budworth Hall, Ongar, Essex. Members meet on alternate Tuesdays at St Martin's Church Rooms, Castle St, Ongar, Essex. Visit [www.ongarphotoclub.co.uk](http://www.ongarphotoclub.co.uk).

### THE PRACTICAL PHOTOGRAPHIC GROUP

The group is holding an exhibition at Sidcup Library from 22 May–4 June. The library can be found at Hadlow Road Sidcup, Kent DA14 4AQ. To contact the group call 01322 438 038.

### MUMBLES AND WEST CROSS PHOTOGRAPHIC SOCIETY

The society stages an exhibition of members' prints at Oystermouth Castle, Mumbles, Swansea, South Wales, until the end of May. Visit [www.mwxphotosoc.org.uk](http://www.mwxphotosoc.org.uk).

**FREE PHOTO EVENT!**

**Saturday 5th June 8:45am - 5:45pm**

**[www.PARKCAMERAS.COM/IMAGING-FESTIVAL](http://www.PARKCAMERAS.COM/IMAGING-FESTIVAL)**

**Join us at our  
showroom, for the  
biggest photo event  
we have ever held!!**

To many an ideal Summer consist of two elements – fantastic weather and exciting festivals. This year at Park Cameras we are looking to create our very own carnival atmosphere with our first Imaging Festival, taking place on **Saturday 5th June 2010** and everyone is invited!

Building upon successful events in both 2008 and 2009 we are confident that our Imaging Festival in 2010 will be our biggest and best event to date – take a look at what we have planned and we are sure that you will agree that this will be a date not to be missed...

**Representatives from over 50 of the worlds  
leading imaging brands instore**

**The very latest in imaging &  
audio visual products**

**Unrepeatable pricing on the very latest  
'must have' photographic equipment**

**Free 'bite size' School of Photography  
photographic courses with professional  
photographers Jon Gray and John Clements**

**Promotions, Cash Backs,  
discounts and free prize draws**

**The chance to purchase the quite  
stunning Panasonic DMC-G2\***

**....and much, much more!!**

**FREE PRIZE DRAW**

**Have the chance to  
win a superb Canon  
PowerShot S90!!**

**1 / 2 PRICE  
SENSOR CLEAN\***

\*1 Per Cust. T&Cs apply - see web for details

KEEPING YOU IN THE PICTURE

**[www.ParkCameras.com/AP](http://www.ParkCameras.com/AP)**

**01444 23 70 60**

\*Availability of the Panasonic DMC-G2 subject to delivery from Panasonic UK

# APReview

The latest photography books, exhibitions and websites. By Jeff Meyer

© ALISTAIR BERG

BOOK

## Dreams & Goals

The World Cup & World Football 1990-2010

By Alistair Berg, Dewi Lewis Media, hardback, 288 pages, £30, ISBN 9781905928064

**THE WORLD CUP** is upon us once again, and amid all the glitz and hype it's easy to forget what the world's most popular game means to its far-flung fans. As Alistair Berg shows us in this brilliant volume, for some it is pride, for others a sense of community, a pastime, a profession, an obsession and even a way out.

Berg pulls together some 300 images of people

enjoying their favourite sport from more than 50 countries worldwide. Although he spends plenty of time on the pitch, he also takes us to the games played barefoot in the streets. This is very much a study of the game from the fans' perspective. One doesn't often think of sports and documentary photography in the same breath, but Berg's keen eye and creative compositions make this a most unusual edition in its genre.

## www.nojobwilltravel.co.uk

**THE INTRODUCTION** is rather annoying as you read it from your desk in your cubicle in your air-conditioned glass office in the middle of dreary London. Nina Alton and her boyfriend Charlie, tired of the London rat race, quit their jobs and embarked on a year-long expedition through 44 countries armed with a Canon EOS 1000D and a Canon IXUS with underwater housing. Their website, which they update from the road, serves as a sort of travelogue and photo album of their adventures.

It may seem a little self-indulgent to expect others to follow your year-long holiday, but you'll find yourself religiously sifting through their images across 36 galleries so far. Having shot 24,000 pictures and counting, not every image is fantastic, of course, but they are interesting – particularly the series showing their preparations. Other site features track their route across the map, with miles, altitude, and so on in a series of graphs and charts.

## Art of the Formula 1 Race Car

By James Mann

Motorbooks, hardback, 208 pages, £30, ISBN 978-0-7603-3731-8

### IN CONTRAST

to Alistair Berg's book (left), James Mann's profile of motorsport's Formula 1 cars eschews the grittiness of the streets for a more sparkling study of its racecars's sleek

© TESSA TRAEGER

EXHIBITION

## Voices of the Vivarais

Tessa Traeger. 28 May-26 June.

Purdy Hicks Gallery, 65 Hopton Street, London SE1 9GZ. Tel: 0207 401 9229

**TESSA** Traeger's exhibition is a subtle, thoughtful look at the way of life of the farming communities of the Vivarais region of France. This collection of 50 silver-gelatin prints was 15 years in the making and aims to show how this simple way of life is under threat from EU directives and cultural change. Shot with a plate camera and wet negatives, Traeger wanted her equipment to reflect the 19th century world in which the people of the Vivarais live, a society where to spend money is shameful and the only thing they'd change are the anxieties of failing crops. Traeger's subtly beautiful images should be seen in person.

and lustrous form. Set against stark black backgrounds, Mann explores every angle of these machines, from close-ups of spiralling wires to overhead views. Many times the cars are quite cleverly almost eclipsed by shadow, with just the carefully lit outline of their shape visible.

The pictures seem to leap off the page, and they really are quite different from the motorsport images we are used to seeing. However, with such a close study of the nuances of each make and model of car you will probably need

BOOK

to be a fan of Formula 1 to keep your interest piqued all the way through. With that caveat in mind, add an extra star to this review if you're a Formula 1 fanatic.

© JESSA RAFFER

# CONDENSED READING

A round-up of the latest photography books on the market

● **THE GADGET SCIENTIST**  
Guide to Using Your Digital Camera, By Mark Burton, £12.99

This small, unassuming book is simplistic in approach, but that's not always a bad thing. Aimed at compact camera users and people more interested in shooting the family at Christmas than the Old Man of Storr, each page addresses a new function or common problem. On the left is a 'bad' picture illustrating the problem and why it happened. On the right is a 'good' picture and text on how to fix it.

● **LLWYBR ARFORDIR**  
Ceredigion Coastal Path, By Phil Jones, £19.99

No, we didn't spill water on the keyboard, but what this location lacks in vowels it makes up for with deep blue skies, stunning greenery and coastline scenery. Jones's images are beautiful, yet informative of the place. It's a location book that actually makes you want to visit – how about that! Look for Phil's profile of the path in this week's *Insider Knowledge* on page 21.

● **MICHELLE OBAMA**  
The First Lady in Photographs, By Deborah Willis and Emily Bernard, £18.99 What is the point of this book? To capitalise on the American First Lady's popularity, of course. However, as this collection is almost entirely made up of stills from campaign performances, there's no depth or better understanding of Michelle Obama. It just feels hollow and cynical.

● **TIGER: LORD OF THE JUNGLE**  
By Alain Pons & François Moutou, £14.99 Photographer Pons joins vet Moutou in a study of the current state of tigers. The images are fine, if not spectacular, and the text is interesting. Ultimately, though, it feels like it was designed and self-published at PhotoBox – which isn't a bad thing, it just has a basic feel.

# Letters

Share your views and opinions with fellow AP readers every week

## LETTER OF THE WEEK

Wins a 20-roll pack of 36-exposure Fujifilm Superia ISO 200 35mm film or a Fujifilm 4GB media card\*

FUJIFILM

### LIVING IN THE PAST

After reading Alan Carpenter's *Backchat* in AP 24 April, I feel compelled to comment. Why do photographers like Alan constantly feel the need to battle with archaic technology in the hope that they'll look like real photographers? He describes, quite proudly, using his Kodak Retinette 1A with its vague focusing scale and limited shutter speeds. For goodness sake, Alan, bring yourself up to date, man! Nobody uses those cameras any more. I'm a Retinette 1B man myself: built-in lightmeter, 1/500sec shutter, proper late-1960s camera smell – check me out.

**Ronan Cantwell, East Lothian**

**Quite, Ronan. I'm right behind you – Damien Demolder**

## Write to...

'Letters' at the usual AP address (see page 3) fax to 020 3148 8130 or email to amateur photographer @ipcmedia.com

\*Please indicate whether you would like to receive Fujifilm film or a memory card (please state type preferred) and include your full postal address

## Backchat

Send your thoughts or views (about 500 words) to 'Backchat' at the usual AP address (see page 3). A fee of £50 will be paid on publication

### A LONG WAIT

Like Paul Newman (*Letters*, AP 8 May), I've been waiting since the dawn of digital photography for a compact camera that would match decent 35mm film compacts. I moved to digital imaging as soon as the Nikon D70 appeared, but digital compacts are still a poor shadow of the best of the film era. I've owned several, and have the mental scars to prove it.

Ricoh has come closest with the GX200. Ergonomically, it is almost perfect, it has manual features aplenty and raw support. I love using it. Yet inside lurks a teeny, weeny 12MP sensor conspiring against me. Plus, the camera is locked to ISO 64.

Why, a decade into the digital era, are we still waiting for mainstream compacts for the keen amateur market? The Sigma compacts were an attempt, but ergonomically not perfect, while a Micro Four Thirds camera is too big. And a £1,400 Leica with poor AF? Eh, no thanks. I want a real pocket camera: a digital Olympus XA (but OK, a little bigger, if necessary). Is it really that difficult or costly to produce? Or am I deluding myself that there's market for serious fixed-lens compact cameras? **John Killeen, via email**

**The market is there all right, but it is waiting for the camera to fill it – Damien Demolder, Editor**

### TAKE YOUR TIME

Regarding Jonathan Reid's letter about shooting excessive amounts of pictures (AP 8 May), since turning to digital imaging I often return home after a shoot and find myself deleting hundreds of dud images. In my film days I used to think through every shot before tripping the shutter, and my ratio of successful shots was way higher than I achieve shooting digital. Now, I work by restricting myself to 36 shots, as in my film days, and refrain from checking the images on the monitor. It's a useful exercise in retrieving lost skills such as estimating when – or indeed why – a picture might fail.

Naturally, anyone out to earn money from their work will stick to shooting hundreds of images 'just to make sure'. But for myself, I'd sooner end up with three pictures worth printing than 300 suitable only for binning!

**Tom Cave, Tyne & Wear**

### PRE-ELECTION FEVER

Even allowing his status as Parliament's officially appointed election photographer, I wonder if Simon Roberts managed to escape police intervention while taking pictures – especially as he used an Ebony 45S (5x4in) camera (*News*, AP 1 May). You can't blend into the crowd with one of those.

Eighteen months ago, I spotted a well-known MP who was visiting my area. He was sitting outside a restaurant having a coffee. I was 50 yards or so away, so I tried to take a photo of him with my superzoom compact. As I framed my shot, the MP looked across and whispered something to one of his security team, who hurried over to me and in expletive-ridden sentences told me not to take pictures. I explained that the MP in question represented the party I'd always supported, and that I was a fan, but it cut no ice. Neither did my request to speak to the MP and explain my harmless actions. A police officer present at the scene also decided it would be best if I moved on. Of course, this was before the recent election fever, so I imagine that same MP's response to the camera lately has been significantly more obliging.

I hope Simon Roberts got the public's support in his request for photos to aid his own election project. Or will we perhaps be reading via AP's news pages of those who came to grief for having the gall to attempt that once most simple of tasks: taking pictures in public!

**Andy Rice, Tyne & Wear**

**I hope your ex-favourite MP is now an ex-MP – Damien Demolder, Editor**

### BIG CAMERAS, SMALL HANDS

Over the years I've noticed that in camera tests the camera's aesthetics are often called into question. For example, if a tester finds that a camera is too small in his or her hands, then the camera gets marked down, but I find this unfair and biased. Being a female photographer and, having felt the brunt of the male-biased discipline of photography over the past couple of years at Focus in Birmingham, I do not feel it is

## What The Duck

<http://www.whattheduck.net/>

## INSPIRING INSECTS

Thanks for a great article on focus stacking in AP 17 April. I have tried macro photography before, but I have always felt limited by the shallow depth of field. However, inspired by David Vennings' insect photos, I ordered a set of bellows on eBay for £25. I tried it with a few of my lenses and settled on the Canon EF 50mm f/1.4. Keen to photograph any insect I could find, I settled on a rather dusty wasp, which had been lying dead in my garage for a week or so. I set up the bellows on the tripod and manually turned the focus ring for each of the 40 shots. The result is below, and while no match for David Vennings' images it's not bad for a first go. I used a Canon EOS 7D, 50mm lens, 4secs at f/8, ISO 100 and halogen desk lamp.

For anyone else wanting to try the technique, here are a few points that I thought were missing from the article:

- You can use one of your existing lenses (and Canon users can use the depth of field preview button to trick the lens into staying at a certain aperture)
- A £25 set of bellows from eBay works just fine
- You don't need a special rig; small turns of the focus ring give plenty of control
- If you already have Photoshop CS4, you don't need any other software (plus, there are plenty of CS4 focus-stacking tutorials available on the internet)

Thanks again for a very inspiring article. I look forward to trying it out on another unfortunate insect. **David Stephenson, Bristol**

DAVID STEPHENSON

appropriate, necessary, acceptable or equal for a male tester to state that a camera is marked down because it does not fit his fist. I am sure it is easy for you to put an outline of the tester's hand on the results page that will serve as a guideline for female photographers who probably have a smaller palm and fist. It will give a real impression of the size of the tester's hand in relation to the camera. **Bev Ward, via email**

Normally, we comment on whether the camera feels large or not and say that it could be fine for those with smaller or larger hands. Personally, I usually say I have large hands for my size and gender – **Angela Nicholson, technical editor**

## KEEP AN OPEN MIND

I frequently applaud Roger Hicks for his deliberate goading of the reader with a controversial headline, but his article in AP 1 May bordered on the bigoted. 'I don't like opera' is analogous to saying I don't like violins – or to quote a photographic parallel, I don't like portraits or landscapes. To damn a whole musical genre because, quite probably, he hasn't heard an opera he likes is too closed-minded to grace your pages.

Or perhaps he doesn't like music, or sculpture, or fine art either.

Let's not discourage Roger from the wilder side of his opinion, but let us encourage a slightly more open mind.

**Laurence Greetham, via email**

I shall ask him to be more careful with the tenor of his articles in future, and to conduct himself a little better. I warn you, though, I don't suppose I'll have much Gluck – **Damien Demolder, Editor**

# BACK CHAT

**'He takes snaps, you are a photographer, I create images.' Which are you? asks Eain Scott**

**DOES** it matter what we call ourselves? I think it does, because of what each term implies. In the case above the implication is that the 'snapper' is not really serious about the activity and so the product holds less interest. Let us leave the term 'photographer' aside for a moment and look at the last category. In my view, the 'creator of images' is suggesting that his or her work is somehow on a higher plane, that it takes more effort, more skill and is maybe even 'art'.

It is this word 'image' that is the culprit. Even among the least pretentious of photographers (and that includes those who write for this magazine), it is creeping into current usage as a substitute for the perfectly adequate word 'photograph'.

The relevant definition of 'image' is 'the imitation of an object's external form'. Note that the medium used is never specified. It could be the smiley face scraped in the dust on the back of a truck, Michelangelo's David hacked out of marble or a landscape rendered electronically on your monitor. All are images – but only one is a photograph, a representation made by light on a sensitised surface.

Why does the word 'image' have this more weighty connotation in our minds? The second commandment Moses allegedly brought down from the mountain goes something like this: 'Thou shalt not make unto thee any graven image, or any likeness of any thing'. Of course, no reader of *Amateur Photographer* pays the slightest heed to it – fortunately for camera manufacturers! But that word 'image' is serious and, especially when linked in with that weird word 'graven', sounds really naughty. Perhaps by using the term we are getting some kind of extra pleasure in flouting a taboo held deeply in our memories. No, that is surely too fanciful – it must be something else.

Could it be that the increasing use of the term 'image' has coincided with the recent explosion in digital photography, as people became uneasy with the fact that what they had photographed was being viewed ephemerally on a screen rather than more permanently on paper? However, the temporary screening of photographs is not new. The public lecture and slide show were once very popular, but were always termed photographic slides as far as I am aware.

No, the answer has to be fashion. Someone uses a term (perhaps mistakenly) and someone else hears it and thinks, 'Oh, that's cool!' (another word that grates). Then he or she uses it in turn and so it goes... My wife maintains that language changes, that I am pedantic, an old fogey, and that I will have to learn to accept it. Perhaps she is right. But does that mean the day will come when I will have to renew my subscription to *Amateur Imager*?

# SIGMA

## OUR WORLD

**Liz O. Baylen:** Born in 1979, she graduated from Ohio University's School of Visual Communications in 2001 and began working for The Washington Times. She has covered assignments around the world and was selected as a finalist for the Pulitzer Prize while with The Washington Times. Most recently, her images have appeared in several major newspapers.

*Photo data: SIGMA 24-70mm F2.8 IF EX DG HSM. 1/800 second exposure at F5.0*

### LIZ O. BAYLEN SHOOTS THE WORLD WITH A SIGMA LENS.

#### An unusual scene captured by a Sigma lens - croquet in New York's Central Park!

This photograph was captured by a Sigma lens, a large aperture standard zoom lens optimised for full-frame digital SLR cameras. Benefiting from the latest optical design, a compact body length of only 94.7mm is achieved. Extra Low Dispersion (ELD), Special Low Dispersion (SLD) glass elements and an aspherical lens compensate for colour aberrations and ensure high image quality. The Super Multi-Layer Coating reduces flare and ghosting, and the Hyper Sonic Motor (HSM) ensures quiet, high-speed autofocus while allowing full-time manual focus override.

**Compact, large aperture standard zoom lens featuring an HSM system and optimised for full-frame digital SLR cameras.**

Thoughts from a wildlife photographer's world

**A MEMBER** of the passerine sub-order of birds (which includes sparrows, blackbirds, finches and so on), the dipper is short-tailed, small and stocky with a white throat. It measures about 18cm in length.

The dipper is closely associated with swift-running rivers and streams, and it is often assumed that its name is derived from the remarkable way it feeds – diving into or running quickly in and out of the water in pursuit of aquatic larvae, small fish and freshwater shrimps. However, it is really named after its habit of bobbing up and down on a rock perch while cocking its tail.

Highly territorial, the dipper's song resembles that of the wren (another passerine), being loud, bubbling and musical. Its flight is low and 'whirring'.

It is not classified in the UK as a threatened species, and the RSPB broadly estimates the breeding population as between 6,800 and 20,000 pairs. These can be found mainly in upland areas of England, Scotland and Wales, but also along low-lying rivers in the West Country.

**ANDY ROUSE** is one of the world's most prominent wildlife photographers and a passionate

conservationist – two roles that go hand in hand as far as he is concerned. A professional photographer for more than ten years, Andy has worked in every corner of the planet and photographed everything from ladybirds to elephants. He has a dozen books to his name and regularly appears on TV. He has also won multiple wildlife photography awards.

In this weekly column, Andy recounts some of his experiences, shares his thoughts and highlights issues from the wildlife world. You can see his work at [www.andyrouse.co.uk](http://www.andyrouse.co.uk) and read his blog at [www.andyrouse.co.uk/blog.asp](http://www.andyrouse.co.uk/blog.asp). You can even become a fan and keep up to date with 'Andy Rouse Wildlife Photography' on Facebook.

Tracking down a beautiful bird

## TAKING A DIPPER

**THE FATHER** and son looked at me as if they had seen a ghost. I stared back, wondering what was wrong. After all, it's quite normal to

see a grown man dressed in a camouflage cape sitting in the water with his wellies, isn't it? Well it is when you photograph dippers.

If you had asked me a year ago if I wanted to photograph dippers I would have said no. On the outside they are seemingly nondescript little chaps, with the white chest their only apparently attractive feature. However, looks can be deceptive as the dipper is quite a beautiful little bird, with a reddish tinge to the feathers and a quirky knack of 'dipping' up and down. The greatest attraction for me, though, is the habitat in which the dipper lives – fast-flowing streams, which offer a wealth of creative possibilities. There is also the fieldcraft element, as dippers are very difficult to photograph. Put all these factors together and you can see why I was sitting on the riverbank looking like Rambo's ghost.

I was a 'dipper virgin' this year, and the first thing I learnt about dippers is that they fiercely

defend their territory. This means that once you see a dipper flying, you can assume that you are in the territory so the next step is to find its favourite perching rock. Since I started my dipper season quite late, I skipped this phase and went straight to the nest. Dippers are shy birds and nest photography requires care to avoid disturbance. It is unlikely once they have young that they will abandon them, but the parents have stress enough without me adding to it. Luckily, the nest I found was on top of a small waterfall and they tended to perch around at the bottom before feeding the young so I could fill my creative boots and satisfy my ethical side, too.

Now, I expect you know by now that I strive for something different all the time. The average dipper picture shows the bird on a rock against a black background, which is something I wanted to avoid at all costs. So, after many hours sitting by the river watching dipper behaviour, an idea for a shot started to form. I would take a leaf from a landscape photographer's book and use a slow shutter speed of 1/5sec to blur the water around the dipper. Brilliant idea! Hang on, what does a dipper do best? Oh yes, it dips. However, it might be the fidget of the bird world, but just occasionally it does sit absolutely still. So I tried it, and many images later I managed to get this one that has the dipper sharp and the water blurred behind. Rambo's ghost strikes again! **AP**

BRINGING  
YOU ESSENTIAL  
EXPERT ADVICE  
EVERY WEEK

# PHOTO INSIGHT

## STEVE BLOOM

The world's leading wildlife photographer is bringing his expertise to AP. Steve has written dozens of books on wildlife photography

**Steve Bloom explains how he battled contrasty light and merged two exposures to create this emotive panorama of a panda in China**

**I TOOK** this image in Sichuan Province, China, a region renowned for giant pandas. It is home to around 30% of the world panda population and there are several breeding centres in the area. I took this shot at the Wolong panda-breeding centre in the Wolong National Nature Reserve. A couple of years ago a major earthquake in China destroyed much of the Wolong breeding centre and the pandas had to be relocated to a new site.

I had considered photographing pandas

in the wild, but I knew there would be good opportunities to capture memorable animal portraits at the reserve. In this way, I wouldn't risk harassing the pandas.

Many animal habitats are being destroyed by human activity, but rather than show the devastation I prefer to capture the beauty of what we have and remind people what we've got to lose. I made special arrangements with the staff to go on foot to areas where I could photograph the pandas up close. This involved clambering up part of a mountain to track them down. The pandas are not wild, but the enclosures are expansive so you do have to look carefully to see them. It was extremely steep and I was lying down, taking care to keep my camera steady and not tumble down the slope at the same time. I find it helpful to make a 'V' shape by pulling your arms close to your body rather than holding the camera away from your body. This gives you more stability. It's also helpful to breathe slowly and not become flustered as this will make it difficult to keep the camera still and result in blurred images. All these things sound obvious, and they're not rocket science, but it's easy to forget the little things when you've spotted the perfect scene and are hurrying to take a picture.

It was the middle of winter and you

can make out the snow on the rock on the right-hand side. The mountains in the distance are also dusted with snow. I wanted to show the panda's setting to convey something of its environment. I decided to shoot in landscape format and include as much of the surroundings as possible. I felt a panoramic shot would enable me to do this.

My eye kept darting from the panda to the surroundings and back again. Frustratingly, I didn't have my panoramic camera with me, so I decided to combine two exposures to show the full breadth of this magnificent scene. I photographed the panda and then moved my camera to the left and took a picture of the surroundings. Combining the images was a process of overlaying the two exposures afterwards (see *Talking technique*, right). Combining more than one image to create a panoramic is more akin to how the human eye 'sees'. When we survey a scene, we are constantly taking in information around us and a panoramic image is one way of imitating this.

The scene was quite dark due to the dense undergrowth, which limited the amount of available light. I used my Canon EOS-1N and 16-35mm lens with Fujichrome Provia 100 film, which I push-processed by setting

© STEVE BLOOM

## 'I used to get angry and frustrated and stew over the images I thought I should have captured'

my camera to 200, which is a 'push' of one stop. The film is then overdeveloped at the developing stage to compensate for the underexposure. 'Uprating' the film and later push-processing it in this way enabled me to stop down to give extra depth of field so I could show the background more clearly. I was also able to use a faster shutter speed and so ensure the panda was sharp. This was particularly important since I was handholding my camera.

Pandas are tough animals to photograph. Their white faces and black eyes cause the camera to struggle when trying to expose. Getting a correct exposure is a question of trial and error, and in many of the shots I found the black was too black or the white too white. As I was shooting film, ultimately I didn't know if I'd got a successful exposure but I used my best assessment of the light at the time, opting for an average exposure, and trusted I'd got it right. You can always

pull back some detail using dodging and burning on the computer later if you need to. I always pay particular attention to an animal's eyes, brightening them a little to make them sparkle.

The panda knew I was there, but it didn't seem bothered by my presence. I'm no Doctor Dolittle, but it's important to emit the right vibes so the animal doesn't feel threatened. Body language is key – not making any sudden movements or moving too quickly. Yet there comes a point when you have to stop thinking, analysing and composing and just press the shutter, otherwise you'll never take the shot.

When I was starting out I used to be mortified by the photographic opportunities I'd missed – a lion jumping out at a zebra when I was looking elsewhere, for example. I used to get angry and frustrated and stew over the images I thought I should have captured but hadn't. Then I remembered that photography is a combination of luck, timing and skill, and you don't get it right all the time. I gradually became grateful for the photographs I had taken successfully and didn't dwell on the ones I'd missed. This was a major learning process and I certainly didn't always think like that! **AP**

**Steve Bloom was talking to Gemma Padley**

## TALKING TECHNIQUE

Stitching images together isn't difficult to do, but it does take some practice to perfect. One way is to use Photomerge in Photoshop (File>Automate>Photomerge). Click 'File' and select your images one at a time, making sure you upload the image on the left-side first. When you are happy with the order, in the layout menu select 'Auto' and then click 'OK'. Photomerge blends the images together. Once this is complete, look for any edges that aren't aligned smoothly or blurred areas caused by subject movement. Make adjustments using the Saturation and Exposure sliders, and sharpen and crop as necessary. Save your image.

To see more images by Steve visit [www.stevebloomphoto.com](http://www.stevebloomphoto.com). Signed copies of Steve's book **Spirit of the Wild** published by Thames & Hudson, priced £18.95 are available from [www.stevebloomshop.com](http://www.stevebloomshop.com).

## TAKE AWARD-WINNING GARDEN AND PLANT PHOTOGRAPHS

With **CLIVE NICHOLS** Tuesday 29 June 2010, 6.30pm-8pm

To be held at the Blue Fin Building, London SE1

© CLIVE NICHOLS WWW.CLIVENICHOLS.COM

**J**OIN us for the fifth in our series of photographic seminars, and learn how to create dynamic garden, flower and plant images.

Clive Nichols is one of the world's top contemporary garden photographers. He has won numerous awards and published many books. Clive is also a co-founder of International Garden Photographer of the Year, the world's premier competition for garden and plant photography with a top prize of £5,000 and an annual exhibition at Royal Botanic Gardens, Kew.

Learn fascinating techniques to help develop your flower and garden photography, as Clive shows you how to: obtain pin-sharp images of garden scenes and flowers/foliage up-close; use different apertures to control depth of field; select different lenses to create striking

compositions of gardens and flowers; 'read' the light to obtain stunning natural-light photographs, whatever the weather; use reflectors to bounce natural light into dark or shadowy areas and different shutter speeds to freeze or record movement; look for pattern to create striking compositions and abstracts.

After the presentation, there will be a Q&A session with Clive, followed by tea and coffee and a chance to buy a signed copy of Clive's books, as well as International Garden Photographer of the Year books.

Tickets are on a first-come, first-served basis at £29 per person. This includes the presentation, tea and coffee and a goody bag with MAGIX Website Maker 3 software worth £29.99.

### HOW TO BOOK YOUR PLACE

**EMAIL** us at [spiadmin@ipcmedia.com](mailto:spiadmin@ipcmedia.com) with the words 'CLIVE NICHOLS SEMINAR' in the subject line. Please include your name, address and telephone number.

**POST** a cheque for £29, made payable to 'IPC Media Ltd', to Estelle Hicks-Bennett, SPI Seminar, Room 9-372, IPC Media, **BLUE FIN BUILDING**, 110 Southwark Street, London SE1 OSU. Please include your name, address, email and telephone number.

**CALL** 0203 148 4326 /21 to pay by card.

**PLEASE NOTE** places are only confirmed upon receipt of payment. Tickets are non-refundable.

## Need to know

### How to get there

The Ceredigion Coastal Path extends along the western edge of Ceredigion in West Wales (Cardigan Bay). Train access is at Aberystwyth, close to the north end of the start of the path. Road access from the south is via the M4/A48 to Carmarthen and then A484 to Cardigan, or from the east via the A44 to Aberystwyth. The A487 runs up and down the coastal path.

### Where to stay

There are many B&Bs in the towns along the coastal path with hotels in some busier spots. Many are in Aberystwyth, Aberaeron, New Quay and Cardigan. Campers are well catered for along the whole of the path. For a list of places to stay visit [www.bnb-directory.com](http://www.bnb-directory.com).

### Where to eat

There are plenty of places to eat in the main stops along the route, although some are a little way off the path itself so go prepared with food and water. Check your route on an OS map to see how far it is between pit stops! For suggestions visit [www.tripadvisor.co.uk/Restaurants-g186427-Ceredigion-Wales.html](http://www.tripadvisor.co.uk/Restaurants-g186427-Ceredigion-Wales.html)

### Don't miss

The submerged forest at Borth is a very impressive sight at low tide and with a good sunset. The stumps are part of the Welsh legend of Cantre'r Gwaelod – a sunken land that extended many miles out into the Cardigan Bay.

### Reader offer

To buy a copy of Phil's book *Ceredigion Coastal Path* (ISBN 978-1848512139 published by Gomer Press) for £15.99 (rrp £19.99) including free p&p, call 01559 363 092 or email [orders@gomer.co.uk](mailto:orders@gomer.co.uk) and quote Amateur Photographer. Offer ends 30 June 2010. For more about Phil's book, see *Review* on page 11 of this issue.

AP's guide to Britain's best photo locations.  
This week... **the Ceredigion Coastal Path**

# INSIDER KNOWLEDGE

**Phil Jones**

**Age** 46  
**Occupation** Consultant physician,

**Aberystwyth Favourite photographers** Charlie Waite, David Noton, Nick Brandt  
**Favourite location** Coastal or inland water scenes  
**Photographic approach** Composition, preparation, exposure

**EXTENDING** from Ynyslas in the north to Cardigan in the south, the Ceredigion Coastal Path weaves its way along the west coast of Wales offering myriad photographic opportunities. The route takes in a varied landscape of sandy dunes and beaches, rocky areas, cliffs and secluded coves. Opened on 3 July 2008, the whole walk stretches some 60 miles (96km), but can be broken down into smaller sections. The path is almost always next to the sea, but it strays inland at a couple of points.

Along the coast visitors can expect beautiful sea views, and on a clear day it is possible to see a great distance

across Cardigan Bay. In addition to the picturesque landscapes there are other photographic opportunities, such as sightings of Atlantic grey seals, bottlenose dolphins and plenty of bird life. In autumn seals pup on beaches towards the south and the resident population of dolphins in Cardigan Bay is worth keeping an eye out for. Leather-back turtles are also visitors to the area.

Phil Jones has lived in Aberystwyth for 15 years and walked the path with his camera capturing a variety of images from multiple viewpoints. Here he looks at a few notable vantage points along the route.

## Derelict farmhouse

Canon EOS 30D, Sigma 10-20mm, 1/10sec at f/22, ISO 100

Dotted along the coastal path between Aberystwyth and Llanrhystud are a number of dilapidated farm buildings that make great photographs. This particular barn is close to Blaenplwyf and its yellow roof caught my eye. The colours on the day were exquisite and the view extends all the way out to the Irish Sea. The intense blue of the sky and contrasting greens and yellows of the fields combine with the delicate cloud shapes to make what I feel is a timeless coastal image. The ubiquitous sheep, a symbol of Wales, added a light-hearted touch,

which sets this image apart from many other coastal images. I wanted to find a way to bring all these separate components together. To do this I needed to find a viewpoint that would enable me to make a feature of the barn, but also incorporate the surrounding sky, land and sea. I wanted to keep the horizon low to make the most of the sky with its dramatic cloud trails. After some deliberation I settled on a position where I could place the farm in one corner and balance the sky and land around it. There are also several lime kilns scattered along the path, which make interesting subjects.

## Moody sea

Canon EOS 50D, Sigma 18-200mm, 1/13sec at f/16, ISO 100

Carreg Bica, between Llangrannog and Cilborth beaches, is an instantly recognisable rocky outcrop. Legend has it that this is the discarded tooth of a Welsh giant. Llangrannog is a busy seaside resort and especially popular among surfers. I had planned to get a photograph of Ynys Lochtyn – a small island on the coast of Cardigan Bay – and had some time to spare. I knew the tide was on its way in and so chanced my luck. I wanted the rock that is jutting out of the water to stand out against the twilight sky. The white house on the cliff in the top left corner adds a sense of scale. I always stand back and look at the entire scene before I start shooting to get an idea of how I can frame it for maximum impact. In this case I wanted to find an angle that incorporated the darker areas of rock with the sky to give the composition added drama rather than create a solely aesthetic image.

## Curving bay

Canon EOS 50D, Sigma 10-20mm, 0.3secs at f/16, ISO 100

At the northern end of Aberystwyth's promenade stands Constitution Hill with the longest funicular railway in the UK at 778ft (237 metres). There is also a camera obscura with a 14in lens that visitors can use to view the town below. The view looking south reveals the promenade, pier, castle ruins and Pen Dinas Monument on the hill. I have tried to capture a sense of movement by including the sweep of land as it curves around the bay. I tend to shoot as wide as possible to show as much of the scene as I can. I took this at twilight in autumn as the light was fading. The path is west facing so sunset is the best time to capture the most dramatic shots. I was standing at the top of the hill just off the beaten track to get a clear view and levelled my camera on the tripod. I adjusted my camera angle to include the pastel-coloured cloud in the top right corner, which I felt added balance.

## Jutting branch

Canon EOS 40D, Sigma 10-20mm, 1/15sec at f/22, ISO 100

Just north of New Quay is the beach of Cei Bach. On warm days a boat trip from New Quay is rewarded with views of the resident bottlenose dolphin population, seals and a multitude of birds. On this occasion I was walking from Aberaeron to New Quay when I spotted a tree branch jutting out from the side of the beach. It was an obvious opportunity to capture a very different photograph of Cei Bach. The light falling on the bark illuminated the texture of the wood giving it an extra dimension, and the shape of the spindly twigs is an interesting compositional feature in its own right. I framed the image so the branch stretched across the full breadth of the frame to make the most of it and provide interest against the bright but blank sky behind. The tree has since succumbed to gravity as I discovered on a return visit, so this shot can't be repeated.

## Inviting gate

Canon EOS 30D, Sigma 10-20mm, 1/160sec at f/5, ISO 100

The trek from New Quay to Cwmtudu is hard going, but the landscape becomes progressively more impressive so it is worth persevering. This island is just north of Cwmtudu. There used to be an Iron Age fort, although the remains are scant due to erosion. The open gate brings an enticing quality to the image and invites the viewer to peer further into the scene. Here the gate, slightly ajar, takes the eye to the beach below. I was standing on the fence and angled my camera to include the gate and cliff edges below. An open gate is a recognisable sight along any coastal path, and when photographed from a conventional viewpoint is unlikely to result in an exciting image. Yet from above it takes on a new significance and becomes a central component in the scene.

## Waterfall

Canon EOS 20D, Sigma 10-20mm, 1/5sec at f/22, ISO 100

There is an impressive waterfall just north of the main beach at Tresaith and small rainbows of colour are visible at certain times of day. I often shoot in portrait format for landscape shots and here it worked well because of the waterfall's vertical shape. Shooting in this way allowed me to keep a tight composition and not waste space in the frame. Whether I choose to shoot landscape or portrait format depends on what is happening around the main point of interest. If there is a strong foreground but little else of interest on either side, I tend to shoot portrait to give greater emphasis to the foreground subject. Working in this way avoids leading the eye out of the frame as it removes empty space or uninteresting subjects.

## Dunes

Canon EOS 30D, Sigma 10-20mm, 1/8sec at f/22, ISO 100

Ynyslas is a wonderful area at the southern mouth of the Dyfi estuary. Adjacent to the beach is a large tract of dune land with a designated walk slicing straight through. This area is part of a protected site so the landscape is well preserved. I wanted to capture the bird footprints leading into the sand dunes. They bring an extra dimension to the composition by drawing the eye into the scene. Other factors that draw the composition together include the faint cloud outline that fits neatly into the left of the dunes on the left-hand side of the image, adding to the symmetry. The key factor, however, is the camera angle. I set up my camera just off the ground and adjusted my shooting angle to bring out the undulating shape of the dune. The low angle combined with the flush of grass hints at what is over the brow of the hill, bringing intrigue to this oft-seen subject.

**INSIDER KNOWLEDGE**  
As the coastal path at Traethgwynn beach is not available at high water, check tidal conditions

**£100 UP FOR GRABS**

**Do you know of a great photo location?** Share it with your fellow readers and earn yourself £100 in the process. Submit a collection of at least ten images with a brief explanation of where the location is and what is special about it. We'll call to interview you about the details, so you don't have to write anything, but make sure the pictures are centred around one place. We are looking for the inside track on well-known as well as new locations anywhere in the UK. Send a CD/DVD in the first instance to 'Insider Knowledge' at the address shown on page 3. Visit [www.amateurphotographer.co.uk/knowledge](http://www.amateurphotographer.co.uk/knowledge) for more info.

This page: 'Private Eyes, London, 1955.' Outside the opticians

Far right: 'Leg Over Girl, 1957.' This was a friend of Ken Russell's, who worked at the Troubadour coffee bar. Several of the staff there came to his studio for a set of experimental photographs

# Eye for a difference

Legendary director **Ken Russell** may have made his name in films, but in the 1950s he was also a skilful photographer with a penchant for the surreal. **Gemma Padley** looks back at the career of an extraordinary artistic talent

**KEN RUSSELL** is not known for his subtlety. As the director of controversial films such as *Women in Love* (1969) and *The Devils* (1971), he has always embraced outrageous subject matter and never shied away from exploring explicit visual narratives. While it is for the moving image that he is most famous, Ken's roots are firmly of the photographic kind. An exhibition celebrating some of his most striking work is currently on display at the TopFoto Gallery in Edenbridge, Kent.

## REDISCOVERED NEGATIVES

It was by chance that the negatives from Russell's early photographic career were found and a stroke of luck that they were able to be exhibited at all. For 50 years the negatives lay hidden away in the vaults of the Pictorial Press agency (now TopFoto) where Russell worked. Uncovered in 2005, the negatives were shown to Russell at his home in Lymington, Hampshire, for identification before being whisked away to the TopFoto Archives. Shortly afterwards a fire ripped through Ken's house, destroying many of his original scripts and research notes. The negatives, recently removed, fortunately survived unscathed.

## NOTABLE WORK

Ken's route into photography was as unconventional as his images. After a

short career as a ballet dancer, he studied photography at Walthamstow College in East London, producing important bodies of work such as 'The Last of the Teddy Girls', a series on the teddy girls in London after the Second World War who were identifiable by their distinctive haircuts, neckties and boyish tailored jackets. The teddy girl images ended up in *Picture Post* magazine and are unique insights into post-war trends and lifestyles.

Later, Ken produced a series of images of the Troubadour 'coffee girls' (see above), who worked at the popular coffee house in Earl's Court, London, where Russell and a host of actors and artists regularly visited. These images, experimental, quirky and bold in equal measure, embody Ken's eye for the bizarre. The 'coffee girls' came to his studio where he photographed them wearing hip baths and lampshades, and striking unusual poses. 'I got to know the girls who worked at the Troubadour,' says Ken. 'They were a fascinating group of girls. I chatted to them and they posed for me. They were pretty amazing; I just got on and photographed them.'

## EARLY CAREER

With ambitions to be a fashion photographer, Ken read *Amateur Photographer* – 'the bible' for budding photographers, as he called it in a previous

ALL PICTURES © JEFFREY KEN RUSSELL

interview with AP (see 11 June 2005 issue). Unable to break into the fashion industry, explaining, 'I wanted to make the pictures interesting, but the clients didn't want to know about my ideas', Ken turned his photographic attentions elsewhere, pursuing a career as a freelance photographer achieving success with advertising work and contributing to *Illustrated* magazine as well as *Picture Post*. Predominantly using a Rolleicord and also a Leica, Ken would photograph whatever caught his eye. 'I wandered around Portobello Road in London snapping whatever took my fancy,' he says. 'I just photographed what I wanted'.

#### FROM PHOTOGRAPHER TO FILM-MAKER

Borrowing a 16mm Bolex cine camera, Ken started to make amateur movies and went on to work for the BBC where he made documentaries for a series called *Monitor* (1958–65) and ultimately full-length films for which he achieved both notoriety and critical success.

'Photography was a means to an end for me,' he says. 'As soon as I'd mastered it, I moved on.' However, he admits that his photographic training influenced his film-making, especially where composition was concerned. 'Finding ways to make the image work visually is what I was brought up to do,' he says. 'You learn how to take photographs and it's not that different to being a cinematographer,' he adds. 'Once you can do one you can do the other. Technically, they are very similar. Composition is composition.'

#### CINEMATIC EYE

Learning about texture, form and pattern, 'which I promptly discarded,' says Ken, his 'cinematic eye' was clearly evident during his early days as a photographer. Making what he called 'still films', some of the images with their surreal bias hint at the quirkiness that would follow in his films. There is an obvious narrative thread running through many of his images. One shoot Ken remembers in particular is a group of children acting out a

**Above:** 'Troubadour: The Penny Farthing Bicycle, London, 1956.' From a series on the uses of a penny farthing (borrowed from the Troubadour coffee shop)

**Right:** 'I Regret to Inform You..., London, 1955.' For 30 years, 72-year-old Zora Raeburn wrote novels and sent them to publishers. This photo shows her with a montage of the rejection letters she received

**‘There was no problem approaching people and I never experienced any trouble. I didn’t make a big deal out of it and neither did they’**

pretend wedding. ‘I asked a group of children to dress up as if they were at a wedding,’ he says. These candid images would be near impossible to shoot today, but in a more liberal and less guarded age they are unique and charming self-contained ‘mini-films’.

Nowadays, with authorities making it increasingly difficult for photographers to take pictures in the street without being stopped and questioned, Ken’s images are unrepeatable. ‘I could photograph anything I liked and I didn’t see a reason why I shouldn’t,’ he says resolutely. ‘There was no problem approaching people and I never experienced any trouble. I didn’t make a big deal out of it and neither did they.’ Was he already thinking like a director at this stage? ‘I suppose I was to some extent,’ says Ken,

‘although I hadn’t explicitly thought about becoming a director at that point.’

#### SPOTTING THE BIZARRE IN THE EVERYDAY

Ken’s ability to spot and extract the oddities in ordinary moments for dramatic effect is part of the appeal of his images. Playful visual imagery is a key force. From a strategically placed unblinking eye staring from a poster (see page 24) to a brilliantly observed tableau featuring a woman in a wheelchair, two women pushing her along and a woman admiring a statue in the background (above) the images are both absurd and wonderfully eccentric.

Often laced with humour and a faintly sardonic edge, images such as ‘Christian Soldiers, Portobello Road, London, 1954’

**Above left: ‘Faces of Eve, London, 1957.’ An open-air exhibition. Looking at the sculpture is Mrs Collins, Ken Russell’s landlady**

**Top right: ‘Christian Soldiers, Portobello Road, London, 1954.’ Collecting for the Salvation Army**

**Above right: ‘Watching the Detectives, London, 1954.’ Private eyes of the Mask Agency**

(top right) are mildly unsettling. In this picture a woman stares directly at the camera with a slightly crazed expression on her face. Behind her the hubbub of activity ensues. Images such as this aren’t records of everyday life in the conventional sense; Ken uses his camera to draw attention to passing oddities that might otherwise go unnoticed.

Central to his images is the power of suggestion. Often using the device of a frame within a frame or manipulating available light, as in the silhouetted image of two detectives talking (above), Ken combines documentary street photography with storytelling.

‘Some of the images have subtle overtones, I think,’ he says. ‘I tuned into anything that seemed weird. The novelty value appealed to me.’ **AP**

An exhibition of **Ken Russell’s** work is showing at TopFoto Gallery, Edenbridge, Kent TN8 5PF until 28 May. Call 01732 863 939 for more information or visit [www.topfotogallery.com](http://www.topfotogallery.com)

## Dawid Rokita London

Dawid, 26, started taking pictures two years ago after he borrowed a friend's camera, which he later bought. 'Photography is both a passion and form of meditation for me,' says Dawid. 'When I'm not in a good mood I'll grab my camera and take some pictures. It helps me switch off as all I think about is how to frame the subject in front of me. I'm still developing my photographic taste so I prefer to shoot different subjects,' he adds. 'I like to photograph people, but when I read Steve Bloom's *Photo Insight* column in AP and the amazing places he's been to and the wildlife he has photographed, I'm inspired to do the same.' Dawid spotted these intriguing structures behind St Paul's Cathedral in London, hidden between office buildings.

### Vent... 2

2 Dawid adjusted his shooting position until he had the composition he wanted. 'The biggest challenge was balancing the light and shadow,' he says

## Nathaniel Gonzales

Oxford

Although he was interested in photography as a child, 35-year-old Nathaniel bought his first SLR camera in 2001 and switched to a DSLR in 2006. He enjoys photographing landscapes and nature, and hopes to travel the world one day taking pictures. 'I find beauty in unspoilt landscapes,' he says. 'For me, photography is spontaneous. If I have my camera with me I can sometimes capture dramatic or humorous moments.' Nathaniel took these images in January.

### Frozen grass... 1

1 'I find the texture of the grass and drama of the light interesting,' says Nathaniel

Canon EOS 50D, 70-300mm, 1/250sec at f/4.5, ISO 400

### Frozen leaf

2 The frozen stream creates interesting swirls that complement the brightly coloured leaf

# Igor Stravinsky

**Arnold Newman's** austere but brilliantly composed portrait has become one of the best-known images of the 20th century. **David Clark** finds out what makes this photograph so special

**'IT'S NOT** important *what* we photograph, but *how* we photograph,' Arnold Newman famously remarked. 'None of us has ever photographed anything original. The important thing is the way we do it.' Perhaps the most successful example of Newman's creative approach is his portrait of Igor Stravinsky.

When Newman shot the image, on 1 December 1946, he was 28 years old. He had trained as a painter but had begun a career as a photographer, working in a portrait studio in Philadelphia. In 1941 he showed a selection of his personal work to Beaumont Newhall, then curator of photography at New York's Museum of Modern Art.

Newhall was so impressed that he introduced Newman to Alfred Stieglitz, one of the most respected and influential figures in photography at the time. Their association led to further meetings with many European artists, including Piet Mondrian and Marc Chagall, who were then living in New York as refugees from the war in Europe.

Newman began a series of portraits of these artists while still doing his day job of running a successful portrait studio in Florida. The project culminated in his first one-man show, called *Artists Look Like This*, and established him as an important new portrait photographer.

In 1946 he moved permanently to New York and began work as a freelance for

**Photographing Igor Stravinsky was one of Arnold Newman's first assignments for *Harper's Bazaar*, but the magazine never published the picture**

magazines, including *Life* and *Harper's Bazaar*. One of his first assignments for *Harper's Bazaar* was to photograph Igor Stravinsky, who was then in his 60s and one of the most famous composers in the world. 'I started at the top,' Newman later remarked. Russian-born Stravinsky had been a major figure in classical music since his revolutionary *The Rite of Spring* was first performed in 1913.

Although Newman liked working in sitters' own homes or work places, he was asked to photograph Stravinsky in New York, far from the composer's Los Angeles home. He wanted to photograph him with a piano and was offered the opportunity to shoot in the home of

© ARNOLD NEWMAN/GETTY IMAGES

© DOUGLAS KIRKLAND/GETTY IMAGES

one of *Harper's Bazaar's* editors. His equipment of choice during that period was a Speed Graphic 5x4in camera with an 8½in lens, which is equivalent to a 60mm lens in 35mm terms. During the shoot, he asked the composer to sit at the piano and lean his head on his left arm. This made a triangular shape that echoed the other triangles in the frame, particularly where the piano lid is held up by the lid prop.

The sparse elements in the resulting picture – the black piano, combined with the two shades of grey in the background, and Stravinsky's steady gaze and serious expression – made it an austere but stunning portrait.

The contact sheet from the session shows that Newman experimented with a number of different compositions. It also shows that the most famous shot, which shows Stravinsky in the bottom left corner of the image, was only a section of the original image. Newman cropped down the 5x4in negative to a much smaller and narrower rectangle shape, cutting out the piano legs and top corner of the room that was originally shown.

When I spoke to Newman in 2004, he recalled the circumstances of the shoot in detail. 'It was the perfect piano against the perfect background, a simple wall divided into two shades of grey,' he said. 'I went back and forth around that room and decided that I wanted the line in the wall at a particular place in the composition. I've always loved the shape of pianos, and, looking through the viewfinder, I realised that from a certain angle, the piano lid resembled a B flat note. It also had a strong, hard, linear shape, very much like Stravinsky's music.'

'However, if I got in close it spoiled the composition and the relationship between Stravinsky and the piano. So I shot from further back with more space around the subject, knowing I would be able to crop

down to the shape I wanted at the printing stage. The result was a carefully worked-out composition that reflects Stravinsky's carefully worked-out compositions.'

Stravinsky himself was delighted with the picture and the portrait session began a life-long friendship between him and Newman. The two later collaborated on a book of portraits called *Bravo Stravinsky* (1967).

Although Newman is often cited as 'the father of environmental portraiture' because he often preferred to use backgrounds that gave an insight into the sitter's work or personality, he acknowledged that the Stravinsky portrait is a little different. 'If you want to give it a title or a description, you might say it's a symbolic portrait,' he said in an interview with fellow photographer Robert Farber. 'I simply had to solve a problem.'

Newman went on to become one of the world's most famous and influential portrait photographers of the 20th century. The Stravinsky portrait, however, remains his best-known image and Newman himself was aware of the picture's significance. 'It's one of the most important things that ever happened to me,' he said. Ironically, *Harper's Bazaar*, the magazine that commissioned the portrait, decided not to use it. **AP**

#### BOOKS AND WEBSITES

**Books:** There are no books of Newman's photographs currently in print. However, *Arnold Newman* (published by Taschen in 2000) offers an excellent selection of the photographer's work and is available second-hand on [www.amazon.co.uk](http://www.amazon.co.uk), along with a number of other Newman books.

**Websites:** Newman's official website is [www.arnoldnewmanarchive.com](http://www.arnoldnewmanarchive.com). It contains a wide selection of images, insights from Newman himself and other background material. Transcripts of interviews with Newman, including Robert Farber's, can be found by searching [www.photoworkshop.com](http://www.photoworkshop.com).

**Arnold Newman, who was born in 1918, was a news and portrait, photographer who also taught photography in New York. He died in June 2006**

## Events of 1946

### January 10

The first meeting of the General Assembly of the United Nations is held in London's Westminster Central Hall

### January 20

Charles De Gaulle resigns as Prime Minister of the French Provisional Government

### February 14

The Bank of England, previously privately owned and operated, is nationalised

### May 7

The Tokyo Telecommunications Engineering Corporation is founded with approximately 20 employees. The company is later re-named Sony

### July 25

The first underwater test of nuclear weapons takes place near Bikini Atoll in the Pacific Ocean

### October 16

During the post-war series of military tribunals known as the Nuremberg Trials, ten Nazi war criminals are executed by hanging

### November 10

An earthquake in Peru's Ancash region, measuring 7.3 on the Richter Scale, kills at least 1,400 people

### December 11

The United Nations International Children's Emergency Fund, known as UNICEF, is created by the United Nations to provide emergency food and healthcare to children in countries devastated by the Second World War

**'The result was a carefully worked-out composition that reflects Stravinsky's carefully worked-out compositions'**

# AP appraisal

Expert advice, help and tips from AP Editor **Damien Demolder**

Cropped

Mono conversion

**THERE** are so many 'almosts' in street photography that the chances of actually coming away with an interesting and artistically pleasing image are incredibly slim. There is no shortage of subject matter, but with people and cars, not to mention the sun, moving the whole time, getting the elements to combine to create a heavenly scene is no easy job – as Ron has discovered.

Ron spotted this bearded chap on a bike in the Santa Monica district of Barcelona, Spain. He grabbed his camera and managed a shot before the subject tried to ride over him. Ron's problem is that the scene is very cluttered and he has asked for some help to fix it. There is, however, no real fix unless you want to go to the lengths of removing everything other than the cyclist.

So what I've done is crop most of the distractions out, but the greatest distraction is the second cyclist with the eye-catching hat, like a schoolboy dancing behind the presenter in a *News at Ten* live broadcast. We

## Bearded cyclist Ron Bryan

Nikon D60, 18-55mm, 1/200sec at f/7.1, ISO 200

can dilute the impact of these distractions by converting the image to monochrome, which helps to keep them in the background, and objects close to the edges of the frame can be darkened using the Burn tool in Photoshop. This all helps improve the situation, but it is far from ideal.

I found the monochrome image had too much contrast to make the subject stand out, so I've added a colour layer to soften it and to make the image less demanding on the eye. This helps us to see around the picture, but while the second cyclist blends into the background a bit more he is still too prominent a part of the scene. Sometimes you just have to accept that it was an unlucky situation, and that nothing you do to the picture is going to make it into a masterpiece – no matter how compelling the subject.

## WIN

Damien's picture of the week wins a £50 Jessops store voucher\*. The two runners-up each win a £25 voucher\* to spend on photobooks from Jessops' online service at [www.jessops.com](http://www.jessops.com). \*UK residents only

## How to submit your pictures

Send up to six prints, slides or images on CD (please include the original files from the camera along with your submitted versions on your CD). Tell us a little about the pictures and, if you can, include details of equipment used and exposure settings. Send your photographs to 'Appraisal' at our usual address (see page 3). Please enclose an SAE if you would like them returned

**JESSOPS**  
Advice for Life

## Dungeness Lighthouse

### James Marsh

Canon EOS 5D, 24-105mm,  
1/320sec at f/4, ISO 100

**I LIKE** it when photographers try something different, and James's picture of Dungeness Lighthouse in Kent is certainly that. James has picked an excellent set of specs for the job too – thick black frames that show up well. The great thing about shots through glasses, or any other handheld lens, is the difference in focus between the part of the image that shows through the lens and that which surrounds it. Here, though, that contrast between sharp and blurred is lost, as the area that is blurred is too blank for the lack of focus to show.

I really like the black & white treatment, and the off-centre composition makes it clear we're going to be looking at an off-beat image – it's just that I think the technique is a bit wasted on this subject. Instead, go out and find a scene that fills the frame with detail and which will demonstrate the unique qualities of the technique.

**'Here, that contrast between sharp and blurred is lost'**

Original

Edited

## Close encounter

### David Davenport

Nikon F80, Fujichrome Sensia 200,  
scanned via a Canon CanoScan 8800F

**DAVID** has sent some pictures he took at The Otter Trust in Earsham, Suffolk. They show these delightful creatures in a variety of poses and situations. The images were shot on slide film using a Nikon F80, and he has scanned them to send them in. Scanning slides is awkward, because it is difficult to get the colours and contrast as they are in the original. David's shots are excellent, but the scanning lets them down. The colours of the final images are biased towards red and the scanner hasn't created a black point – although there are plenty of very dark, compressed tones. I can't correct this fully, but I have darkened the shadows and removed some of the red from the pictures. Even so, as David has caught this chap at just the right moment to show that inquisitive expression, this is my picture of the week.

# AP Testbench

Over the next few pages we present this week's **equipment tests**, **reader questions** and **technique pointers**

## Phottix Hero £342.28

For more information or to purchase visit [www.phottix.net](http://www.phottix.net)

**THE PHOTTIX HERO** offers a solution for photographers who want to fire a camera remotely, but who also require a Live View preview to monitor the scene. The device consists of two parts, one of which is a transmitter that includes an internal camera. This fits to a camera's viewfinder, where it records the viewfinder image and transmits it to a receiver. The receiver has a 2.4in screen that shows a live feed from the viewfinder.

Alternatively, if your camera has Live View and video output, the supplied video cable can connect the camera directly to the transmitter. This offers a high-quality view on the remote screen.

The Hero is powered by two rechargeable Lithium-Ion batteries that come with the unit. Also included are an assortment of adapters and cables to enable the transmitter to be connected to the shutter-release socket of a variety of cameras. This enables the shutter to be fired from the remote receiver once you are happy with the image on the screen. However, it is important to remember that while the shutter can be fired, exposure settings cannot be adjusted.

With a range of 100 metres when outside, the Hero is not just useful for wildlife photography but for sports events and aerial photography as well. Indoors, it can suffer interference caused by electronic devices, but I found that the range was still around 50 metres. **Richard Sibley**

### The AP guarantee to you

## Snapfish Photo Panels £12.99 (7x5in), £14.99 (10x8in)

For more information or to order visit [www.snapfish.co.uk](http://www.snapfish.co.uk)

**SNAPFISH** Photo Panels are 7x5in or 10x8in prints on wooden panels with an easel stand on the back that allow photographs to be displayed on a desk. The wood, which has the smell and texture of MDF, has been dyed black, with a black lacquered finish on the reverse. Although the edges of the wood have been sanded, there are still slight marks where the material has been cut to size. I like the textured appearance that these marks give to the panel.

The image is printed on a slightly glossy scratch- and UV-resistant surface on the front of the panel. Colours are well reproduced and are bright and vivid, although a monochrome image did have a slight red tint to it (see above).

Reasonably priced and with a gloss finish, Snapfish Photo Panels are a good alternative to having a traditional framed image on your desk or mantelpiece. **Richard Sibley**

**FORTHCOMING TESTS** In the next few weeks AP hopes to run the following equipment through the most rigorous testing procedures in the industry...

### AF-S Nikkor 24mm f/1.4G ED vs Sigma 24mm f/1.8 EX DG Asph Macro

Geoffrey Crawley tests two wideangle lenses that are worlds apart – in era and in price.

### Panasonic Lumix DMC-G2 vs Samsung NX10

Panasonic's new touchscreen Micro Four Thirds camera goes head to head with Samsung's mirrorless APS-C model.

### Photoshop CS5

What more can Photoshop do? We take a look at the latest version, CS5.

### £300 DSLRs

A second body is now within the reach of many enthusiasts. We put four £300 DSLRs to the test.

### Epson Perfection V600 Photo

With a 6400dpi optical scanning resolution, we find out how good the V600 Photo is at scanning film as well as prints.

# Canon EOS 1D Mark IV

Canon's EOS-1D Mark III failed to impress some professional photographers, but perhaps the new 16.1-million-pixel **EOS-1D Mark IV** version will regain their confidence

**Angela Nicholson**  
Technical editor

**CANON** had quite a torrid time with its EOS-1D Mark III, which was announced in February 2007. First, there were the notorious AF issues, with some users claiming that the camera couldn't follow focus as well as its predecessor, the

EOS-1D Mark IIN. Initially, Canon batted these concerns away, saying the problems reported by some professionals were a result of them not understanding or correctly selecting the various custom modes. This may have been a fair point in certain cases, but it soon became apparent that the camera also had problems that had to be addressed by a couple of firmware upgrades as well as the recall of some bodies.

To make matters worse, Nikon created quite a stir in August 2007 when it announced the D3 and D300. Nikon

## AT A GLANCE

- 16.1 million effective pixels
- APS-H-sized (27.9x18.6mm) sensor
- 10fps continuous shooting
- New 45-point AF system
- Street price approximately £3,740

had made a huge leap forward with the introduction of the full-frame, 12.1-million-pixel D3, with its maximum sensitivity setting of ISO 25,600, 9fps continuous shooting and 51 AF points. Subsequently, the ten-million-pixel Canon EOS-1D Mark III, with its sub-full-frame (APS-H-sized) sensor, started to lose its appeal despite its 10fps shooting rate. Unfortunately for Canon, many professional photographers chose to switch systems and use Nikon equipment.

Clearly, Canon has learned a few lessons in the intervening period. Its recent DSLRs have indicated a change in its ethos, as new systems and technology have been introduced to make the company's cameras even more competitive. For the latest camera in the EOS-1D series, the EOS-1D Mark IV, this has meant a completely new AF system, a 16.1-million-pixel APS-H-format sensor and a maximum sensitivity setting equivalent to ISO 102,400, which matches that of Nikon's D3S. It could be the riposte that Canon has been searching for.

## FEATURES

Although the EOS-1D Mark IV is quoted as having an APS-H-sized sensor like its predecessor, it is interesting that the dimensions of the imaging device have actually shrunk marginally from 28.1x18.7mm in the EOS-1D Mark III to 27.9x18.6mm in the new camera. As before, this puts it between an APS-C and a full-frame device,

and it produces a 1.3x focal length magnification factor. However, this isn't the only difference between the two sensors. For many people, the most important point is that the effective pixel count has been increased from 10.1 million to 16.1 million, and this has necessitated a drop in pixel size (in microns) from  $7.2 \times 7.2 \mu\text{m}$  to  $5.7 \times 5.7 \mu\text{m}$ . This could have negative repercussions for the signal-to-noise ratio, but Canon has introduced a range of measures to help minimise image noise levels. For instance, the photodiodes occupy a greater proportion of the pixel area to increase the size of the light-receiving area and a new material has been used for the primary colour filter to boost light transmission. As with the EOS 7D and EOS 550D, the microlenses over the EOS-1D Mark IV's sensor are gapless and closer to the photodiode than before to boost light capture. Canon also claims that noise suppression has been improved and that doubling the internal gain of the preamp helps increase the signal-to-noise ratio.

All these measures, plus improvements brought by the switch from dual Digic III to dual Digic 4 processors, means Canon has felt confident enough to give the EOS-1D Mark IV a sensitivity range of ISO 100-12,800, which can be expanded to the equivalent of ISO 50-102,400. The impressively high maximum sensitivity setting matches the highest value possible with the camera's main competitor, the Nikon D3S.

The EOS-1D Mark IV is primarily aimed at photojournalists and sports photographers who demand a high continuous shooting rate. Despite its much higher pixel count, the EOS-1D Mark IV is capable of shooting at the same maximum rate – 10fps – as its predecessor. This gives

**This JPEG image was taken at ISO 12,800 with the high-sensitivity noise reduction set to Standard. The details are softened a little and some chroma noise is visible, but the result is nevertheless impressive**

**'I found the EOS-1D Mark IV easy to get to grips with, and its controls are sensibly arranged'**

the Canon camera a 1fps advantage over the Nikon D3S.

Given the problems with the EOS-1D Mark III's AF, it is hardly surprising that Canon has introduced a completely new system for the EOS-1D Mark IV, with new hardware and firmware. I will cover this in greater detail later, but the important aspects are that it has 45 user-selectable points, with 39 being f/2.8-sensitive cross-type.

Video-recording technology is fast becoming essential in a photojournalist's camera and the EOS-1D Mark IV can record movies as MOV files at three sizes. These are 1920x1080 pixels (Full HD), 1280x720 pixels (HD) and 640x480 pixels (SD) with MPEG-4 AVC compression and a selection of frame rates available at each size.

With such a well-specified camera it seems almost churlish to point out that the EOS-1D Mark IV doesn't have a built-in level like Canon's top-end APS-C-format DSLR, the EOS 7D, or the Nikon D3S. And now that Canon has finally seen the light and introduced wireless flash control via the pop-up flash unit of the enthusiast-level EOS 7D, perhaps it is time for the company to include the technology found in its ST-E2 Speedlite Transmitter in a professional-level DSLR.

**9/10**

## BUILD AND HANDLING

At the risk of stating the obvious, the EOS-1D Mark IV is a big camera as, like its forebears, it has both vertical and horizontal grips built-in. These make the back of the camera much squarer in shape than the models below it in the Canon DSLR line-up, so users trading up to the EOS-1D Mark IV may find that they need to invest in a bag that is able to accommodate their new toy.

The new camera has the same magnesium-alloy construction and 76 dust and waterproof seals as the camera it replaces. It feels very solid and built to last. However, by my calculations the quoted 300,000-cycle shutter durability only equates to around 8 hours and 20 minutes' use at 10fps. While this would be an exhausting single shoot, it doesn't really seem that long for the expected life of a key component of a professional sports photographer's camera.

Despite the introduction of video-recording technology, Canon has kept the construction and control layout of the EOS-1D Mark IV very similar to the Mark III version, but there are a few little tweaks that have been made in response to feedback from users. Many of the buttons on the back of the Mark IV, for instance, have been made more prominent and require a longer, firmer press so they are easier to locate and have a more positive feel. The mini-joystick multi-controller has also been made more pronounced so it is easier to operate. In addition, small holes have appeared in the back of the vertical handgrip and the far right of the front of the camera to allow the inclusion of a speaker and internal microphone respectively.

While EOS-1D Mark III users may appreciate the similarity of the EOS-1D Mark IV's control system, I am surprised there isn't a dedicated Live View and video-recording button with a switch to determine whether still or movie footage is to be recorded. This was a welcome introduction with the EOS 7D and I suspect that the journalists using the EOS-1D Mark IV are even more likely to need to switch quickly between recording modes than EOS 7D users.

There are, however, two ways to start video recording, depending upon the option selected for Custom Function IV 11. The default mode is to activate Live View mode with a press of the Set button at the centre of the Quick Control dial on the camera back and then start video recording by pressing the flash exposure lock (FEL) button that sits near the shutter release. Alternatively, the FEL button can be used to start recording directly, but this is at the expense of its flash-exposure lock role.

I found the EOS-1D Mark IV easy to get to grips with, and on the whole its controls are sensibly arranged and within reach. As with the EOS-1D Mark III, though, the mini-joystick multi-controller, which I generally use to select the active AF point, is out of reach when the camera is rotated through 90° and my finger is poised over the shutter-release button on the vertical grip. Rather unhelpfully, the menu and information screen don't rotate when the camera is held in this orientation.

Although the menu is extensive and there are 62 custom functions, the options are sensibly arranged and grouped so it doesn't take too long to become familiar with the layout and find what you need. However, given the complexity of the AF system, I think Canon should revisit this section of the custom menu and make the function of the

various options a little clearer. Fortunately, up to three sets of custom functions can be saved and recalled, which is very useful and allows the photographer to switch quickly between working arrangements. The My Menu screen is also helpful for some of the more frequently used, or heavily buried, menu functions, such as the mirror lock-up or the AF AI Servo Tracking sensitivity (Custom function III: Autofocus/Drive 2).

**8/10**

### RESOLUTION, NOISE AND SENSITIVITY

When Nikon announced the launch of the D3S, it raised the bar for noise control and sensitivity. Canon has matched the D3S's maximum sensitivity setting of ISO 102,400 for stills and video capture with the EOS-1D Mark IV, but the results are extremely noisy. When the noise reduction is turned off the level of noise is off the scale of our testing regime, so we are unable to report meaningful figures at ISO 51,200 and 102,400. Even in the raw files, detail resolution is heavily compromised at these highest expansion settings and I would avoid using the ISO 102,400 option.

Noise is well controlled up to around ISO 1600. Between this point and ISO 51,200 (inclusive), JPEG files taken with the noise reduction set to its default standard level have more chroma and luminance noise than comparable JPEGs from the full-frame, 12-million-pixel Nikon D3S. Although the level of noise in JPEGs captured by the Canon camera at ISO 102,400 with the noise reduction set to its default level is lower than that in JPEGs from the D3S, the EOS-1D Mark IV's files contain much less detail. Green and red splodges are visible in the Canon camera's images, especially in the shadows, even when they are sized to make small prints. At more routine sensitivity settings, the EOS-1D Mark IV is capable of recording a high level of detail.

**27/30**

### DYNAMIC RANGE

At face value, a measured dynamic range of 10.5EV seems low for the EOS-1D Mark IV, but I didn't notice any restriction in the range when shooting real-world photographic images. The fairly steep mid-section of the dynamic-range curve indicates good midtone contrast, which helps convey the impression of detail. At the shadow end the curve dips sharply, indicating a compression of the tones in this area.

In keeping with Canon's other DSLRs, the EOS-1D Mark IV has both Highlight Tone Priority (HTP) and four levels (including off) of shadow-boosting Auto Lighting Optimiser (ALO). As with the EOS 550D and EOS 7D, these options can't be used simultaneously.

Although it can be difficult to predict the degree of lightening that will be seen when ALO is employed, it can be useful when there are important details that need bringing out in the shadows. When contrast is high it can help photographers produce

print-ready images direct from the camera, thus saving time at the computer.

**7/10**

### VIEWFINDER, LCD, LIVE VIEW AND VIDEO

As an APS-H-format camera, the EOS-1D Mark IV has a smaller viewfinder than the full-frame EOS-1Ds Mark III. However, it offers an approximately 100% field of view with 0.76x magnification. This is interesting as the APS-C-format EOS 7D also offers a 100% field of view, but it has 1x magnification, which means its viewfinder is slightly larger. Nevertheless, the EOS-1D

Mark IV's viewfinder is very clear and bright, and it is easy to focus manually when viewing the scene through it.

Camera LCDs have moved on a little since the EOS-1D Mark III was launched and the Mark IV camera's screen has a much higher resolution with 920,000 dots (307,000 pixels). Like the EOS 7D, the space between the crystals and the reinforced glass cover (previously acrylic) of the EOS-1D Mark IV's 3in LCD screen has been filled with an optical elastic material to reduce reflections and glare. In addition, the EOS-1D Mark IV's monitor has an anti-reflective coating that isn't present on the EOS 7D's screen. As a result, when the

This sequence of consecutive images is an extract from a series of 19 taken at 10fps. The AF system kept the player in white perfectly sharp in all but one shot

## FEATURES IN USE CONTINUOUS SHOOTING

**LIKE** the camera it replaces, the EOS-1D Mark IV has a top continuous shooting rate of 10fps. This is made possible by the two Digic 4 image processors, eight-channel signal readout, DDR2 SDRAM buffer memory, a twin motor system (one for cocking the mirror and the other for shutter cocking), and an active mirror stopper to suppress mirror-bounce and maintain a steady viewfinder image.

With a UDMA (90MB/s or 600x) CompactFlash card installed, I found that the 121 maximum burst depth for large JPEG files quoted by Canon is reasonably conservative and I was able to record more than 250 highest quality, large JPEG images, and even 289 on one occasion. However, I was only able to shoot nine raw

files before the camera faltered.

Shooting in excess of 280 images involves holding the shutter-release button down for around 28 seconds. During this test I found that even when shooting the action of a football match, I only shot continuously in bursts of 5secs or less, but it's good to have the option to shoot more. Photographers shooting athletics events, for example, may appreciate the ability to record entire 100m and 200m events.

Although I am sure the sound of the EOS-1D Mark IV firing continuously would alert a nearby deer to a photographer's presence, the mirror-movement dampening is much better than that in the Sony Alpha 900.

EOS-1D Mark IV is turned off, the screen looks absolutely black and it is possible to view images on it even in quite bright ambient light.

To meet the demands of many professional photographers, the EOS-1D Mark IV is video enabled and exposure can be controlled manually, or automatically by the camera. The frame rate for Full HD (1920x1080-pixel) footage can be set to 30p, 25p or 24p fps. Faster frame rates are available for the smaller image sizes (see page 49). The appearance of the footage may be changed by altering the selected Picture Style, and the effects of dynamic-range-enhancing Auto Lighting Optimizer are also applied along with the Peripheral Illumination Correction if it is activated.

High-quality video capture is possible, but as usual the built-in monaural microphone is prone to recording hand movements and lens noises, so it is advisable to connect an external mic via the 3.5mm stereo port.

9/10

## WHITE BALANCE AND COLOUR

Canon has one of the best, if not the best white balance system currently available and it didn't throw up any surprises during this test. When shooting in early evening shadow, my images taken with the automatic white balance settings are suitably cool, without being excessively cold – which appears to confirm Canon's statement that the AWB has been made more neutral and less warm. My shots taken when shooting under the artificial lighting of a night-time velodrome have a slight warmth that suggests the lighting isn't natural, but without spoiling the images.

Like Canon's other DSLRs, the EOS-1D Mark IV has a collection of Picture Styles (Standard, Portrait, Landscape, Neutral, Faithful and Monochrome) that may be used to adjust the appearance of JPEG images. As usual, the Standard option is a good starting point and it produces vibrant but natural-looking images. Canon has increased the level of sharpening and saturation that is applied in-camera to make images more 'press ready', so that a sharpness of 3 on the EOS-1D Mark IV is equivalent to a setting of 5 on the EOS-1D Mark III. However, those who want to specify the processing that is applied to the JPEG files can opt to tweak the sharpness, saturation and contrast settings for any of the colour Picture Styles, or save three of their own Picture Styles in-camera. Alternatively, the bundled Picture Style Editor software can be used to produce a bespoke image style that can be saved and registered to the camera.

9/10

## METERING

According to Canon, although the EOS-1D Mark IV has the same 63-zone metering system as the camera it replaces, its evaluative metering algorithm has been altered to make it less

# RESOLUTION, NOISE & DYNAMIC RANGE

These images show 72ppi (100% on a computer screen) sections of images of a resolution chart, captured using matching 105mm macro lenses. We show the section of the resolution chart where the camera starts to fail to reproduce the lines separately. The higher the number visible in these images, the better the camera's detail resolution is at the specified sensitivity setting.

**UNDERSTANDING THE GRAPH** This graph shows the brightness values recorded by the test camera when it is used to photograph a stepped gradation wedge. The wedge has transmission values in 1/2EV steps ranging from 0 to 12EV. The camera's exposure is set so the 12EV section in the wedge has a brightness value of 255. Software analysis of the image then determines the recorded brightness values of all the other steps and calculates the camera's dynamic range.

## FOCAL POINTS

### Peripheral illumination correction

Data for 29 lenses is pre-installed, but data for up to 40 lenses can be stored so corner shading can be corrected automatically

### Function button

This button provides access to the white balance and memory card/image size and quality options

### Vertical grip with speaker holes

The buttons to the right provide control over the AF, exposure lock and image magnification when the camera is used in the vertical orientation

### FEL button

This can be used to start video recording, lock flash exposure or for taking multiple spot meter readings

Camera shown actual size

### Metering

In addition to evaluative metering, partial, spot and centreweighted average metering are available. Partial metering measures from an area at the centre of the scene, covering about 13.5% of the viewfinder. The spot meter lacks the precision of some other cameras and covers an area of around 3.8% of the viewfinder area.

### Video recording

At 1920x1080 pixels (Full HD), video may be recorded at 30p, 25p or 24p fps, while 60p or 50p fps recording is possible at HD (1280x720 pixels) and SD (640x480 pixels) resolution.

### Three raw file sizes

There are three raw file sizes available on the EOS-1D Mark IV: four-million-pixel (2448x1632-pixel) S-raw, a nine-million-pixel (3672x2448-pixel) M-raw (Medium-raw) option and the standard 16-million-pixel raw size (4896x3264 pixels). There are also four JPEG image sizes and ten compression ratios.

### Memory cards

The EOS-1D Mark IV has two card slots, one for CompactFlash and the other for SD (and SDHC) media. The photographer can specify how images are saved when both slots are occupied. Images can be stored at different sizes or formats (JPEG or raw) on each card, or movies can be stored on one card and still images on the other.

### Custom function III

### Information screen

### Live View screen

I increased the exposure suggested by the evaluative metering system by  $\frac{1}{2}$ EV to introduce some highlights on the droplets and then darkened the sky in Photoshop to get the result I wanted

reacts to a change in subject distance, determine which AF points are used to track it and to specify whether to prioritise using the main AF point or tracking the subject using the expansion AF points.

Canon attributes some of the reported continuous AF problems encountered with the EOS-1D Mark III to the fact that it has a very responsive system and this means that it is less likely to keep fast-moving subjects sharp if they cannot be kept within the AF frame. The manufacturer has reworked the AI Servo AF algorithm, calling the new version AI Servo II AF, to help make continuous AF more consistent and stable. EOS-1D Mark III users who upgrade to the EOS-1D Mark IV will also notice that the impact of the AF AI Servo Tracking sensitivity settings (Custom function III: Autofocus/Drive 2) has changed with a general slowing of the response time.

I used the EOS-1D Mark IV in a range of conditions designed to test the AF system. Not surprisingly, it struggled the most when I was shooting fast-moving cyclists at an outdoor velodrome after sunset and under fairly poor floodlighting, but I was still able to obtain sequences of sharp shots. When using an EF 70-200mm f/4L IS USM, which doesn't support the full cross-type AF point functionality, I found the AF system a little sluggish (relatively speaking), and when Custom Function III: Autofocus/Drive 3 is set to give focus tracking priority (the default 'O' option), the shooting rate sometimes dipped below 10fps. I noticed a significant increase in the speed of the AF response when the AF AI Servo Tracking sensitivity was pushed to its highest value so the camera reacted quickly to changes in the subject distance. However, when shooting fast-moving subjects at up to 10fps it is easy to be fooled into thinking that the active AF point is consistently over the main subject. It is only when the shots are played back on the LCD screen that it becomes clear that the AF point has often shifted to one side. Although there were a few short bursts where the camera failed to latch on to a cyclist when the light was at its poorest, the subject is acceptably sharp in 75-85% of my images.

Shooting the cyclists in brighter light and/or with an EF 300mm f/2.8L IS USM that supports the full cross-type AF point functionality improves the continuous AF performance significantly. As a result, I also noticed that the camera was able to shoot continuously at its maximum rate more often. It becomes much easier to get sharp 'grab-shots' of a moving subject without tracking it for a while in the viewfinder. With slightly slower moving subjects, such as footballers, the hit rate is higher, with only two or three shots in every 20 or so being a little off target.

dependent upon the subject. However, when shooting a football match with a team in white against a team in mid-green, I noticed that the exposure varied depending upon what colour shirt the active AF point was over. When a player in white was the main subject, the shirt was accurately exposed and looked white, not grey, with no flashing highlight warning on the LCD screen. When the AF point was over a green shirt, however, the camera often selected an exposure that resulted in some of the opposing team's kit being burnt out and the highlight alert could be seen flashing on the brightest parts of the image. Consequently, I found it safer to reduce the exposure by  $\frac{2}{3}$ -1EV. This meant that some of the images needed brightening post-capture, but they survived the process and look good. In most situations, though, the evaluative metering does a very good job.

8/10

### AUTOFOCUS

As I mentioned earlier, Canon has introduced a completely new 45-point autofocus system for the EOS-1D Mark IV, with the primary aim of making it more stable than the EOS-1D Mark III's AF system when focusing continuously in AI mode. While the EOS-1D Mark III has 45 AF points, only 19 of them are user selectable, whereas any of the Mark IV's 45 AF points may be selected for focusing. Of these points, 39 are cross-type (the EOS-1D Mark III has 19 cross-type points) and function with all f/2.8 or faster EF lenses as well as some f/4 EF optics. In a bid to improve focus-tracking reliability and precision further, Canon claims the f/2.8-sensitive line sensors have been improved and some of the f/5.6-sensitive AF points have two lines.

There are 15 custom functions that govern how the AF system works. In the main, these are designed to tailor the camera's response when shooting moving subjects and using the continuous AF mode. The most important functions allow the photographer to adjust the speed with which the camera

9/10

## Competition

Nikon D3S

TESTED 2 JANUARY 2010

Canon EOS-1D Mark III

TESTED 7 JULY 2007

**THE ONLY** direct competition for the Canon EOS-1D Mark IV is the Nikon D3S, which can be found for around £3,580. As well as a very effective 51-point AF system, the D3S has superb low-light capability and excellent noise control, but at 12.1 million its effective pixel count is around four million fewer than that of the Canon camera. It would take a head-to-head test to be certain, but the D3S appears to produce better results at the higher sensitivity settings.

The D3S's maximum continuous shooting rate is 1fps lower than that of the Canon camera, but this is unlikely to be a major deciding factor for many professional photographers.

Despite the issues surrounding it, there are many satisfied EOS-1D Mark III users and it is an affordable alternative to the Mark IV. New bodies can still be found at around £3,000, while mint-condition second-hand examples fetch around £1,900. It has only ten million pixels, but that is enough for A3 prints and the image quality is very high.

## Verdict

**IN MANY** situations the Canon EOS-1D Mark IV captures superbly detailed images with natural, yet punchy colours. The AF system performs well, even in low light, although it is worth paying for fast lenses that get the best from it. Users also need to spend time experimenting with the system so the right options are selected for each subject and situation.

Comparing the results from the EOS-1D Mark IV at ISO 102,400 with those from the Nikon D3S suggests that Canon has felt the need to match its competitor's maximum sensitivity setting, even though the image quality is short of what we usually see from a Canon camera. I recommend keeping to the native sensitivity settings where possible.

Canon has said that it wants to ensure EOS-1D Mark III users have an easy transition to the EOS-1D Mark IV, which I understand, but I am surprised that the manufacturer hasn't taken the opportunity to introduce some of the changes we have seen lower down its DSLR line-up. To be fair, these are refinements to a system that works very well and if I had a spare £3,800 I'd be very tempted by the EOS-1D Mark IV.

# Plustek OpticFilm 7600i SE

With a maximum scanning resolution of 7200ppi, the **Plustek OpticFilm 7600i SE** film scanner promises a lot of power in an affordable package

**Richard Sibley**  
Technical writer

**IT SEEMS** a little obvious to state that the popularity of digital cameras has gradually led to the decline of photographic film, but that is exactly what has happened over the past ten years. However, there are many photographers who still shoot on film, and even more who have decades worth of film images that they wish to archive digitally.

With the slow decline in the number of people using film, the demand for dedicated film scanners has also fallen. As such, Canon has discontinued its range of film scanners, while Nikon now supplies only the Coolscan 9000 ED, which is more than six years old and costs over £2,500.

As flatbed scanners have fallen in price and offer higher and higher resolutions, many amateur photographers now use these to scan their 35mm negatives and slides. Yet despite manufacturers' claims, the quality of flatbed scans does not always match that of a dedicated film scanner.

Thankfully, Plustek continues to offer a

range of dedicated 35mm film scanners and, better still, they are competitively priced. The Plustek OpticFilm 7600i SE on test here scans at an impressive 7200ppi and comes with SilverFast 6.6 SE Plus (Multi-Exposure) scanning software from LaserSoft Imaging, yet costs only around £250.

## FEATURES

Like the other dedicated 35mm film scanners in the OpticFilm range, the 7600i SE has a CCD scan head that is capable of a 7200ppi optical scan resolution. Although this is the same resolution as its predecessor, the 7500i SE, PlusTek has improved the dust and scratch-removal software in the 7600i SE in conjunction with LaserSoft.

The scanner comes with two film holders: one for holding a strip of up to six film frames and the other for holding up to four mounted slides. Unlike other film scanners, the film holders are not automatically fed through the scanner. Instead, they must be manually positioned, which is as simple as sliding the holder into the scanner until your chosen frame clicks into position. Without a motor to pull the film holder when scanning, it is up to the scan head to pass across the film frame.

One of the benefits of the SilverFast 6.6 SE Plus scanning software is that it allows multi-exposure scanning. Many people will be familiar with multi-pass scanning, where a film frame is scanned several times to help reduce digital noise, but multi-exposure scanning is different.

With a D-Max, or dynamic range, of 3.5EV, the OpticFilm 7600i SE may sometimes struggle to extract the maximum possible information from a negative. In this situation,

The 7600i SE is able to resolve the film grain in this image, which was shot using Ilford HP5 Plus

Like all scanned images, film scanned using the OpticFilm 7600i SE requires some sharpening. Although the SilverFast software does a good job, I found the more advanced control offered in Adobe Camera Raw to be preferable

Camera Raw Sharpen

No sharpening

SilverFast USM Sharpen

multi-exposure scanning can be used to scan a negative twice using two different exposures: one for the highlight detail and one for the shadows. The software then uses the information from both scans to create the final image. This is basically the same principle that is used when exposing and creating high dynamic range (HDR) images.

Removing dust and small scratches can be a time-consuming retouching process, and no matter how much care you take over your slides and negatives it is virtually impossible to create a completely dust-free scan. Thankfully, the OpticFilm 7600i SE has built-in infrared dust and scratch detection. For more information on this, see *Dust and scratches* on page 57.

Given that the Plustek OpticFilm 7600i SE has a higher resolution than some more well-known film scanners, comes with SilverFast software and has infrared dust and scratch removal, it is extremely well specified and excellent value for money. As a comparison, a second-hand 4000ppi Nikon Coolscan V ED film scanner still commands around £500.

## PERFORMANCE

The scanner measures a reasonable 272x120x119mm, although you need to allow around 10cm either side of this for the film holders.

Setting up and installing the 7600i SE

is straightforward. Once the software is loaded, the scanner is connected via a USB cable to a computer. Two software CDs are provided. The first of these contains the Plustek QuickScan software, which is compatible with Windows XP, Vista and 7. However, the more advanced SilverFast 6.6 SE Plus is found on the second CD. This allows control over scratch and dust

**The comprehensive selection of features in the SilverFast software can be a little confusing**

reduction, as well as offering the multi-exposure option. It is also worth noting that as well as being compatible with Windows XP, Vista and 7, SilverFast 6.6 SE Plus can work with Apple Mac OS 10.3.9 and higher.

Preparing a negative or slide for scanning is easy. All that is required is to open the relevant film holder, slide the transparency or negative into position and close the holder, making sure that it clicks shut. The film holder then slides through a sprung door into position in the scanner.

Those who have never used SilverFast scanning software may be a little intimidated by the number of different options available. Thankfully, there are two features – Basic mode and Scanning mode – that ease newcomers through the process of making a scan.

Basic Mode is very limited, with a choice of preset output sizes and sharpening settings. Image adjustment is controlled by setting the type of film being scanned, with most popular films available. Midtone brightness, contrast and saturation can be adjusted, but this mode is really only suitable if you are producing images for web use or 6x4in prints.

Switching to Standard mode immediately opens up all the features offered by SilverFast, although the array of small buttons can be confusing. There is a Scan Pilot bar to help guide users. This includes buttons for all the software's major features, allowing you to click through them in turn, starting with the preview scan.

Creating a preview scan takes just a few seconds. Although the specification quotes a time of eight seconds, I found that, including the few seconds the scanner takes to calibrate and kick into action, the preview scan time is nearer 12 seconds.

Having created a preview scan you can then select the area you want to scan and carry out basic exposure adjustments, followed by colour and contrast adjustments that are done using an image curve. To help get the best results, the type

# Dust and scratches

**THE PLUSTEK** OpticFilm 7600i SE's dust- and scratch-removal feature works by scanning using an infrared pass. When the infrared light passes through the negative or slide, it is blocked by dust and debris. Shadows are produced where these are present, and a monochrome image is created that is used as a mask showing the position of the marks on the frame. Once the image is scanned, the iSRD (Infrared Smart Removal of Defects) feature fills in the areas where dust and scratches have been detected.

Overall, the function works well, removing large areas of dust with ease. It does sometimes miss fine scratches (see right) and can produce odd results, but these are easily corrected using Photoshop's Clone or Healing Brush tools.

I recommend leaving the dust- and scratch-removal feature set to automatic. While there are manual sliders to adjust its strength and effect, for the most part the auto setting is extremely accurate. However, for best results always make sure you use a blower brush to get rid of as much dust and debris from your negatives as possible.

of film being scanned can be selected using the NegaFix feature, which then applies a particular colour profile to the image. It is very effective and helps to ensure you don't get strong colour casts.

All that is then left to do before hitting the final scan button is to select the output size and resolution you require.

Scanning and processing a colour negative at the maximum 7200ppi resolution, without Multi-Exposure, Multi-Pass or any noise and dust correction, took around three minutes. A full-colour scan at this resolution produces a TIFF file that is almost 200MB, although the exact size varies depending on how the frame is cropped when scanning. Using the same settings, but with the Multi-Exposure feature switched on, took twice as long.

Multi-Exposure mode isn't designed for use with negative film, and when I tried it there was no discernible difference. When using it with positive transparency film, there was a slight difference, with the amount of detail in shadow areas being improved and less noticeable image noise.

It is a similar story with the Multi-Pass feature. While I found that the amount of noise is reduced, it is still visible in underexposed areas. Increasing the number of scanning passes to as many as eight or 16 helps to reduce the noise, but given that the scanning and processing time was massively increased it may be better to use other noise-reduction methods.

SilverFast has noise-filter software in the form of GANE (Grain And Noise Elimination). This is quite a primitive filter that uses a slight blurred effect to smooth out areas, and in turn it reduces detail. A better option is to save the scanned images as TIFF files and then open them in Adobe Camera Raw and use its noise-reduction tools.

Sharpening is also best done in Adobe Photoshop or Camera Raw. SilverFast has a range of basic presets and a USM filter, but these don't offer the finesse of more sophisticated image-editing packages. For best results, I suggest using a low

**One of the most useful features is NegaFix, which allows you to choose the negative film you are scanning and then automatically adjust the white balance**

level of sharpening when scanning the film, and then applying a final sharpen using image-editing software.

One thing that it is important to get as near perfect as possible when scanning is the colour of the image. The NegaFix feature helps to replicate the colours usually associated with a particular negative film, and this is a good starting point for adjusting the white balance and colour.

A range of colour controls is available for adjusting both negative and positive films. The Levels tool allows for highlight, midtone and shadow adjustment of each of the RGB channels, while the Contrast Curve control allows each channel to be manipulated. These two controls are the most advanced options for adjusting the colour of an image.

Colour casts can be easily corrected by using the software to adjust the white point on a colour gamut chart. Basic adjustment of all the primary RGB and secondary CMY colours can be made using the selective Colour Correction feature. However, this basic tool only allows you to apply preset basic changes to each colour, such as Increase Saturation, Cooler and Brighter.

For best results, I recommend making sure that any basic colour casts are corrected during scanning, but if you wish to adjust individual colour channels do this in more advanced image-editing software. With this in mind, ensure that colours in scanned images are not overly saturated. **AP**

## Verdict

**WITH** little in the way of competition, the Plustek OpticFilm 7600i SE is bound to turn a few heads, especially given its keen price. With a dynamic range of 3.5EV, it may not be able to match the 4.2EV dynamic range of the Nikon Coolscan V, but the Multi-Exposure function can help retrieve some of the lost detail in shadow areas.

The SilverFast software is comprehensive, but despite the Scan Pilot toolbar, the workflow could be made more fluid. This would help to ensure that users get the very best from each scan.

Without a mechanism pulling the film holder through the OpticFilm 7600i SE scanner, images must be scanned one at a time, which can be extremely time consuming and laborious. However, by taking your time, using both the SilverFast software and an external image editor, it is possible to get great scanned images.

Those looking to scan film images should look no further, especially given its excellent price.

## ELUSIVE FILM

**Q** I recently acquired a lovely Minolta 24 Rapid from eBay. I believe this was a great camera in its day, and the version I have is in pretty much mint condition. I would love to try it out, but getting the film (or cassettes to load the film into) is proving to be impossible. Can you offer any advice?

**Gideon Jones**

**A** The Minolta 24 dates from the early 1960s and shoots 16 24x24mm frames on 35mm film in a Karat or Rapid cassette. The Rapid version is what is really needed because it has a brass-coded bar as part of the cassette, which tells the camera (mechanically) the ASA speed of the film. Of course, if you load the cassette yourself (about 18in of film), which you will have to do now, and the film is 400 ASA and the cassette is coded for 50 ASA, the results could be alarming. You can use the earlier Agfa Karat cassettes with no meter actuation bar and use a handheld meter. I had a Minolta 24 for years – the lens is superb, although the meter is a bit unreliable.

The cassettes have not been available new and loaded with film for about 25 years. The best way of finding cassettes is a mixture of eBay and persistence. Do an eBay search on 'Karat rapid

cassettes' every few days and they will eventually turn up. Karat cassettes sometimes turn up as an outfit with an Agfa Karat camera – a 'Karat f/3.5 with four cassettes', for example. Buying such an outfit, keeping two cassettes and selling the camera with the other two is a possibility. You could also try the Camera Centre in Hailsham, East Sussex, which has had some cassettes listed on eBay recently and they tell me they have more available. Call 01323 840 559.

**Ivor Matanle**

## 3D PHOTOGRAPHY... 1

**Q** With regard to the recent letter from Malcolm Taylor (*Ask AP*, AP 1 May), who asked if it is possible to link two digital cameras together, the answer is yes. Joining two cameras together with a common shutter button is a simple DIY task, and I have done it myself with a pair of Kodak EasyShare C330 digital compact cameras (see images above right). Obviously, the exact dimensions will vary from camera pair to camera pair, but the principle is the same: each

camera is held in place with a 1/4in screw and wing nut, all readily available from your local DIY superstore. I can provide a more detailed description of my device to anyone who would like it – it's not an expensive set up.

**Mike Rignal**

**A** If any readers who are fans of stereo photography would like a copy of the description of Mike's device, please drop us a line at [apanswers@ipcmedia.com](mailto:apanswers@ipcmedia.com) and I'll send you a PDF file.

**Ian Farrell**

## 3D PHOTOGRAPHY... 2

**A** I was interested to read Malcolm Taylor's question regarding digital 3D photography in AP 1 May. I became interested in 3D photography after reading Brian May and Elena Vidal's book *A Village Lost and Found* (see *Review*, AP 19–26 December 2009). There are lens adapters available that will split the incoming light through a prism into two slightly separate views, allowing a stereoscopic image to be printed and viewed with a viewer. I ended up buying two low-end digital compact cameras and fashioned a small frame to hold them together and fire (almost) simultaneously to get two images. I then printed the images onto standard 6x4in paper and viewed with a stereoscopic viewer, which can be ordered at low cost on the internet. Of course, if the subject is motionless, then the time-honoured way of

## FROM THE AP FORUM

### Best hard drive for travelling

**Danny1985 asks** I'm backpacking around the world and need an external source on which to keep my images. I'm thinking about a 320GB hard drive, and something small enough to pop into a rucksack and powered by USB. I've got a big Western Digital hard drive at home, which hasn't been too bad over the past three years, but with all the names out there does anyone have any recommendations?

**Large format replies** One of the problems with external drives is that they aren't very shock proof. I'm using a 256GB SSD (solid state drive) that I've installed in a proprietary USB/eSATA case. The

shifting yourself slightly off-centre for each image works just as well.

It seems that the Fujifilm FinePix REAL 3D W1 is a great way of taking photographs for stereoscopic viewing, but I am not convinced that the means of viewing them is convenient and usable.

**Phil Jones**

#### FILTERS FOR PURPOSE

**Q** Having bought my first SLR, it was recommended to me that I buy a protective filter for the front of my lens. I can see the advantage of this, but it seems there are two options: a UV filter and a skylight filter. What is the difference between these, and is it worth paying for an expensive one if they are only for protection and not effects? **Cliff Orchard**

**A** Both UV and skylight filters eliminate some ultraviolet light, thereby fractionally reducing the haziness sometimes seen in landscapes on summer days. They are also relatively affordable, which means they are ideal for protecting the front element of a lens, as it is more cost effective to replace a scratched filter than a scratched lens. The difference between the two is that a skylight filter has a very slight pink cast to it, which was originally designed to reduce the very slight blue cast you see when shooting colour film beneath a deep blue sky. On a digital camera with automatic white balance, the effect of this pink tinge is removed, making the effect of the two filters the same.

As for the cost of such filters, you are paying for glass (or resin) that is as neutral and transparent as possible. I'd advise you to spend as much as you can afford, and keep in mind how much you paid for the lens in the first place. A £1,000 lens deserves a better filter than a £100 optic. **Ian Farrell**

SSD is intrinsically shockproof so is the ideal solution for travelling. However, the capacity is a bit small and the cost a bit big. I've bought several Western Digital Passports and like them. They also look nice and Western Digital is outstanding if anything goes wrong, although I've only ever had a problem with a laptop hard drive.

**RonM replies** I'd recommend LaCie rugged drives. They're more expensive than a standard external hard drive, but I've used them for years without any problems and they've been put through a fair amount.

**Photomark replies** Depending on what countries you're visiting, have you considered not taking a drive at all and relying on internet cafés to send your pictures back so they are waiting for you when you get home? It is a lighter option, with perhaps just a USB card reader and a couple of extra cards to carry. Of course, the flip side is that there aren't too many internet cafés up the Amazon if you're going off the beaten track!

## f/AQ

### Best image quality from your lens

Which aperture provides you with the sharpest lens performance? This is a good question because many of us know that lenses are not always at their sharpest when they are wide open, but improve greatly when stopped down a bit. It's natural, then, to assume that things keep getting better as apertures get smaller, until a lens is delivering its best at its minimum aperture. However, this is not the case.

While a lens delivers the most depth of field at its smallest aperture, a physical phenomenon called diffraction spoils overall sharpness at this setting. Diffraction is always present at any aperture other than the maximum value, but only really starts to spoil the party when very small openings are used. This is pretty annoying because many photographers striving for maximum sharpness are also striving for maximum depth of field, and are forced to compromise on the settings they use.

The balance between poor wide-open performance and poor performance due to diffraction can be established by shooting the same scene at multiple apertures and 'pixel peeping' at 100% at the results. If you are really nerdy, it's an exercise worth doing for all your optics (at various zoom settings) – just make sure you fire the camera from a tripod by remote control to avoid shake as apertures get small and shutter speeds lengthen. You'll find apertures like f/8 or f/11 are often the best compromise.

Before you get too worried about diffraction spoiling your images, though, it should be emphasised that this is only one factor governing image sharpness. You will get just as much, if not more positive benefit from making sure your front lens element is clean and you are avoiding camera shake – tripod, remote and mirror lock at the ready! However, if you are striving for perfection in your landscapes, you may want to open up from f/32 to f/16 and use hyperfocal focusing to maximise depth of field in order to get the ultimate in resolution and sharpness. **Ian Farrell**

Our exclusive deal with  
Adobe allows our students  
to purchase CS4  
Extended for £230\*

\*This price is a special rate for those who do not qualify as a 'full time' student in order to obtain a discounted version of CS4 extended direct from Adobe.

## Digital Photography for beginners

The Foundation in Digital Photography teaches you how to use your digital camera. You will learn:

- Viewpoint and composition
- How to use your camera's program modes
- All about lenses
- Sharpening your image
- Formatting, sizing and printing
- ISO, flash, exposure and white balance setting
- Basic image editing

Course level: beginner

## Digital Photography intermediate

The Diploma in Digital Photography is more a technical course that teaches you advanced digital skills such as:

- Working with tones: Levels and Curves
- Contrast control
- Using white balance
- Black and white techniques, toning and staining
- Working with colour
- Retouching and sharpening
- Sizing, printing and storing

Course level: intermediate

160g (including battery and card)  
**Dimensions**  
99.3x55.7x22mm

**ALTHOUGH** touchscreen compact cameras aren't a new idea, advances in touchscreen technology now mean that they are a viable option when it comes to operating the camera easily.

However, I was a little dubious when Canon announced that the 14.1-million-pixel IXUS 210 was going to have no control buttons, and rely instead on a 3.5in touchscreen. In fact, the IXUS 210 has just three buttons and a single switch, all of which are positioned on the camera's top-plate. The switch changes the camera between its photo, video and automatic modes, while the three buttons function

to turn the camera on and off, activate the image playback mode and, of course, operate the camera's shutter.

Despite the camera lacking the IS (Image Stabilization) suffix, the 24-120mm equivalent lens of the IXUS 210 is stabilised, with Canon claiming that it offers up to a 3EV reduction in the handheld shutter speed.

The 1/2.3in CCD sensor of the IXUS 210 is the same size as that used in the Digital IXUS 200 IS, yet the IXUS 210 has two million more pixels, with 14.1 million compared to the earlier model's 12.1 million. With more photosites crammed on to the same small surface area of the sensor, there is always a risk that image noise could become a problem. This could be why the sensitivity has been limited to a reasonably modest ISO 1600.

### PERFORMANCE

At around the same size as a mobile phone, the IXUS 210 is light and fits comfortably in a trouser pocket. Although the touchscreen is slower to use than buttons, my fears regarding its sensitivity proved unfounded. Only a slight touch is required to press the large virtual buttons, and navigating the settings is simple as Canon has kept the number of options on any one screen to a minimum.

The camera's touch properties are at their best when using the Touch AF feature. This allows the focus area to be selected by simply touching it on the screen. In face-detection mode, touching a point on the screen enables focus tracking of that object, which is useful for following moving subjects. In all, focusing the IXUS 210 is fast and accurate, particularly in single AF point mode.

There are some interesting Smart Shutter modes on the IXUS 210. The Wink Self-Timer starts the camera's self-timer once

it detects an eye blinking at the camera, which is useful for self-portraits. However, the Smile Shutter is my favourite. When set to this mode, the IXUS 210 automatically takes an image when it detects a smiling face in front of it. I was surprised at just how well this feature works.

With centreweighted and spot metering, as well as EV compensation and ISO sensitivity adjustment, there are plenty of manual-exposure options for those who want more from their compact camera.

For the most part, I found that I used the IXUS 210 in its evaluative metering mode. The results were excellent, with images bright and well exposed. The camera also selected sensible exposure settings when given more awkward backlit scenes. Nearly all the images I took would make good prints without further adjustment.

Colours look bright and natural with the My Colour settings turned off, but with 11 different colour style settings, plus a custom setting, it is possible to achieve most colour effects in-camera. I found the Vivid option to be particularly good for bright and bold holiday snapshots.

Given that the camera's sensor has 14.1 million pixels, noise is well controlled. When viewing images at 100%, noise is noticeable even at ISO 200, but as most people won't regularly be making huge prints from a compact camera, it shouldn't be an issue. In-camera noise reduction causes images to have a smudged effect, especially at ISO 1600, although once again this will only be an issue when making prints at around A4 in size. **AP**

Images from the IXUS 210 are well exposed with pleasing colours

## Verdict

**DESPITE** my anxieties about the touchscreen, the Canon

IXUS 210 performed well. It is slower to use than a model with conventional buttons, but given the point-and-shoot nature of compact cameras, most people won't change the settings from one shot to the next. It produces excellent images that are perfect for the casual snapper, while the few manual exposure settings and the stylish design will also appeal to those who demand a little more.

TAMRON AF 18-200mm

F/3.5-6.3 XR Di-II LD Aspherical (IF) Macro

High-powered zoom lens designed for Digital SLRs, incorporating XR (Extra Refractive Index) glass for remarkable lightweight and compactness.

- Multi-coated with internal surface coating to reduce ghosting and flare with outstanding resolution performance
- Minimum focusing distance of just 0.45m
- 1:3.7 Macro capability
- Zoom lock mechanism prevents unwanted barrel extension when carrying the lens
- Accepts 62mm filters

Only available in Canon EOS fit.

only £149.99\*

## BOWENS INTERNATIONAL STUDIO LIGHTING

GEMINI "Gemini ... one of the most popular studio flash systems in the world" Steve Aves

## BOWENS GEMINI NEW ULTRA COMPACT GEMINI 200 & 400

Introducing the new ultra compact Gemini 200 & 400. The Gemini 200 & 400 offers many new features not available on the previous entry-level Gemini flash heads, with out compromising on price or the high-quality standards that have become synonymous with the Bowers brand.

New Features Include:  
• 5 Stop Power Range  
• Auto Power Dump  
• Proportional Modelling Lamp Control

See Steve Aves 'Bowens Gemini R type' review on our website

|                       |       |           |
|-----------------------|-------|-----------|
| 250R Head             | £349  | or £15mth |
| 500R Head             | £399  | or £15mth |
| 250/250 2 Head Kit    | £799  | or £33mth |
| 500/500 2 Head Kit    | £899  | or £33mth |

## Panasonic DMC-G1 + 14-45mm O.I.S

|            |      |           |    |
|------------|------|-----------|----|
| Megapixels | 12.1 | HD Video  | ✓  |
| LCD Screen | 3.0" | FPS       | 3  |
| Live View  | ✓    | Card Type | SD |

**£50 Cashback**  
Panasonic

The Lumix G1 is both compact and light. In fact, the only reason it isn't smaller is down to ergonomics... you can go too far! These qualities allow the camera to be very portable making it an ideal travelling companion.

**Blue Kit only £349.00**  
after cashback from Panasonic

## Panasonic DMC-GF1 + 14-45mm O.I.S

|            |      |           |    |
|------------|------|-----------|----|
| Megapixels | 12.1 | HD Video  | ✓  |
| LCD Screen | 3.0" | FPS       | 3  |
| Live View  | ✓    | Card Type | SD |

By using the Micro Four Thirds System standard and developing a camera body that eliminates the mirror box and optical viewfinder unit, the DMC-GF1 was able to achieve the world's smallest, lightest body as a system camera with a built-in flash.

**Our Price only £549.00**  
Available in Black, Red or Silver

DMC-G1 - Stunning price and feature combination DMC-G2 - Excellent features at a premium price DMC-G10 - Smaller feature set, great price

With cameras often being seen as the star of the show, the importance of a good, high quality bag to house your expensive photographic kit in is one decision that shouldn't be overlooked. From small, pocketable pouches to hard-wearing, multi-product rucksacks across brands such as Lowepro, Kata, Crumpler and Tamrac, time taken in selecting the right bag for you is time well spent.

Express mail delivery insured courier service, usually next working day (orders before 2pm).

We are a small family owned and run company, specialising in photographic consumables. We are based in Leamington Spa, in the heart of Warwickshire - if you are passing, or live close by, please pop into our shop, and meet Judy - our office dog!

Premier Ink & Photographic, Longfield Road, Sydenham Industrial Estate, Leamington Spa, Warwickshire. CV31 1XB.

### PRINTER INK CARTRIDGES

## EPSON

COMPATIBLE & ORIGINAL INK

At Premier Ink Supplies, we stock two types of cartridges for Epson printers - **Originals**, which are made by Epson, and **Compatibles**, which are made by a UK company called **Jet Tec**. Using **Jet Tec Compatibles** is a way of saving money, without compromising on the quality of your prints. Here're the results from two independent ink tests that agree...

"Jet Tec's colours were superb, with single greys and blacks very close to Epson ...so Jet Tec wins!"  
- Total Digital Photography Magazine

"What we're looking at here is not only the best choice of ink for the R300 printer, but also the best ink in this group test, period. There's just no getting away from the superb combination of performance and pricing!"  
- Computer Upgrade Magazine

| Cartridge Code:    | Originals:   | Jet Tec Compatibles:      | Suitable EPSON Printers:                                                                                                          |

## SQUARE FILTERS

### P-Type Filter System

The P-Type square/rectangular filter system consists of three parts:

- 1) An adapter ring that screws onto the front of your lens
- 2) A filter holder clips onto the ring
- 3) One or more P-Type (84mm wide) filters

### P-Type Adapter Rings

|                   |       |
|-------------------|-------|
| 49mm Adapter Ring | £4.99 |
| 52mm Adapter Ring | £4.99 |
| 55mm Adapter Ring | £4.99 |
| 58mm Adapter Ring | £4.99 |
| 62mm Adapter Ring | £4.99 |
| 67mm Adapter Ring | £4.99 |
| 72mm Adapter Ring | £4.99 |
| 77mm Adapter Ring | £4.99 |
| 82mm Adapter Ring | £4.99 |

### P-Type Holders

|                     |        |
|---------------------|--------|
| Holder Standard     | £5.99  |
| Holder Wide Angle   | £9.99  |
| Hood Modular        | £9.99  |
| Hood Bellows        | £34.99 |
| A to P Type Adapter | £9.99  |

### P-Type Bellows Hood

A new design of Bellows Hood that slots into the front of a standard P-Type Holder.

### P-Type Filter Wallet

A smooth cushioned filter wallet, to protect and store up to 8 P-Type filters

We also stock Z-Pro (100mm) and A-Type (67mm) filters, holders and adapter rings

### P-Type Neutral Density Filter Kit

Neutral Density filters have a multitude of uses - from increasing detail in landscapes and reducing over-exposed skies, to creating stunning motion scenes by reducing shutter speeds. Here's a kit which includes all the popular ND filters, and everything you need to get started! The kit contains: 1x ND2 Filter, 1x ND2 Soft Graduated Filter, 1x ND4 Filter, 1x ND4 Soft Graduated Filter, 1x P-Type Filter Holder, 1x P-Type Adapter Ring of your choice (49-82mm). Just £45.99 - saving £5 on the individual prices.

# ROGER HICKS

**Before you rush out and buy the latest new camera model, why not consider first wearing out the one you have?**

**UNTIL** comparatively recently – some time in the 20th century – the only people who could afford to throw something away before it was worn out were the rich. The poor bought the best they could afford (which often was not very good) and wore it out. The classic example is clothes. New clothes would be 'Sunday best', then they became 'everyday' and finally they were relegated to 'old clothes', worn only for dirty jobs. Children were commonly dressed in hand-me-downs that were passed between siblings, cousins and friends. Clothes were patched and boots repaired.

Of course, as soon as you can afford a camera, you're above the hand-to-mouth level of economic existence. Any camera is a luxury, and it sickens me when I read (typically on internet photo forums), that 'everyone in the world now has a mobile phone, and all mobile phones have cameras in them'. There are plenty of people in the world for whom food and clean water are more than they can hope for, let alone mobile phones or phones with cameras in – assuming you want a mobile phone with a camera in (I don't).

Yet we in the rich world now have so many luxuries that we simply can't wear them all out – not as a nation, and not even (unless we try very hard) as individuals. This especially includes expensive, old luxuries. For example, in mid-2009, my sister-in-law gave me a Zeiss Ikon Contaflex Super BC, the rare black one, complete with an interchangeable back. One of her patients had given it to her (she's a doctor). I haven't even put a film through it yet, and the likelihood of my wearing it out is non-existent.

Technology makes a difference, of course. Even before the advent of digital imaging, the leaf-shuttered SLR had been revealed as a technological dead end. So were interchangeable backs, for that matter. Even so, this was a staggeringly expensive luxury camera. In 1963, it cost £124 10s (£124.50), complete with f/2.8 Tessar lens. In comparison, a Leica M2 with an f/2.8 Elmar optic cost £130 12s 2d (£130.61), though of course the Leica had no automation and indeed no meter. Then again, the Contaflex had a non-instant-return mirror and a miserable choice of slow and surprisingly expensive lenses, or rather, Pro-Tessar front components: 35mm f/3.2, 85mm

f/3.2 and 115mm f/4, with the 35mm f/3.2 at £38 8s 2d (£38.41), as against a 35mm f/2.8 Summaron at £44 14s 3d (£44.71).

This immediately raises the question of whether it is worth making some things – especially 'high-tech' consumer goods such as cameras – so well that they will be obsolete before they wear out. The answer, though, is more complex than is immediately obvious.

First, there are things that are simply better. I'd hate to try image processing with my first computer, a

CP/M machine that cost me £1,600 in the mid-1980s and was deadly slow with limited storage (two 5¼in floppies) and a monochrome screen. Even so, I did wear out my last writing computer, a 386, which lasted a dozen years until the motherboard fried.

Second, there are things that it's cheaper to replace

than to repair. Again, computers and their peripherals are a good example, but we've got through four coffee-making machines in the past 10-15 years.

Third, yes, it is often worth buying quality, because once you have something that does what you want, there is no point in replacing it until either it wears out or your needs change. Although I can see scope for improvement in my Leica M9, for example, in the realms of higher ISO and better high ISO performance, further improvements are going to be marginal as far as I am concerned. When the M10 comes out, as no doubt it will in due course, I'd buy an M10 if I didn't already have an M9, but I doubt I'd trade the M9 against an M10. An M8 or M8.2 against an M9 – crop against full frame, no UV/IR filters needed – is another matter. When the M9 wears out, I might take a look at an M11 or M12.

The big problem at this point is that you have to know what you want, and most people don't. Instead of thinking, 'I want a camera (or indeed anything else) that does this and this,' they see something new and think, 'That looks good. I want one.' They never actually think about what it would do for them.

This is always the bottom line. All too often, it's not, 'What do I really want?' but, 'What can I have?' Many people nowadays can have more than they want, provided, of course, that they're not too fussy about what they have, and will take quantity over quality. **AP**

Amateur  
Photographer  
★★★★★

— **well specified**

Fill-in reflector and light diffusing panel installed

— **powerful**

The world's most powerful camera mounted flashgun\*. Guide number 60m/198ft (ISO100/105mm)

— **versatile**

Secondary sub-flash below the main flash gives a fill-in light while bouncing the main flash.

— **wireless TTL**

Supporting Canon E-TTL, E-TTL II and Nikon i-TTL.

— **autozoom**

wide-angle auto zoom head. Rotates horizontally 180° to the right and 90° to the left and tilts up to 90°

— **ease-of-use**

A full colour Auto Rotate Display automatically follows the angle of the camera. The 6 colour coded icons make it easy to identify and choose between the most popular modes.

available at all good  
photographic retailers
